

# Hello, TK!

Juggling creativity and pragmatism, I help multi-disciplinary teams to design & build excellent services and experiences.

# Recent experience in product design teams:

2016

Publicis Sapient

Associate Creative  
Director

Creative Director,  
Experience Design

2019

Babylon Health

Senior Design Manager  
Design Operations

Deputy Product  
Design Director

2021

Farfetch

Senior Design Manager

Head of Design  
(new propositions)

2023

British Telecom

Head of Design  
(ID & Co-create)

# Today

# Babylon Health

Key projects and results:

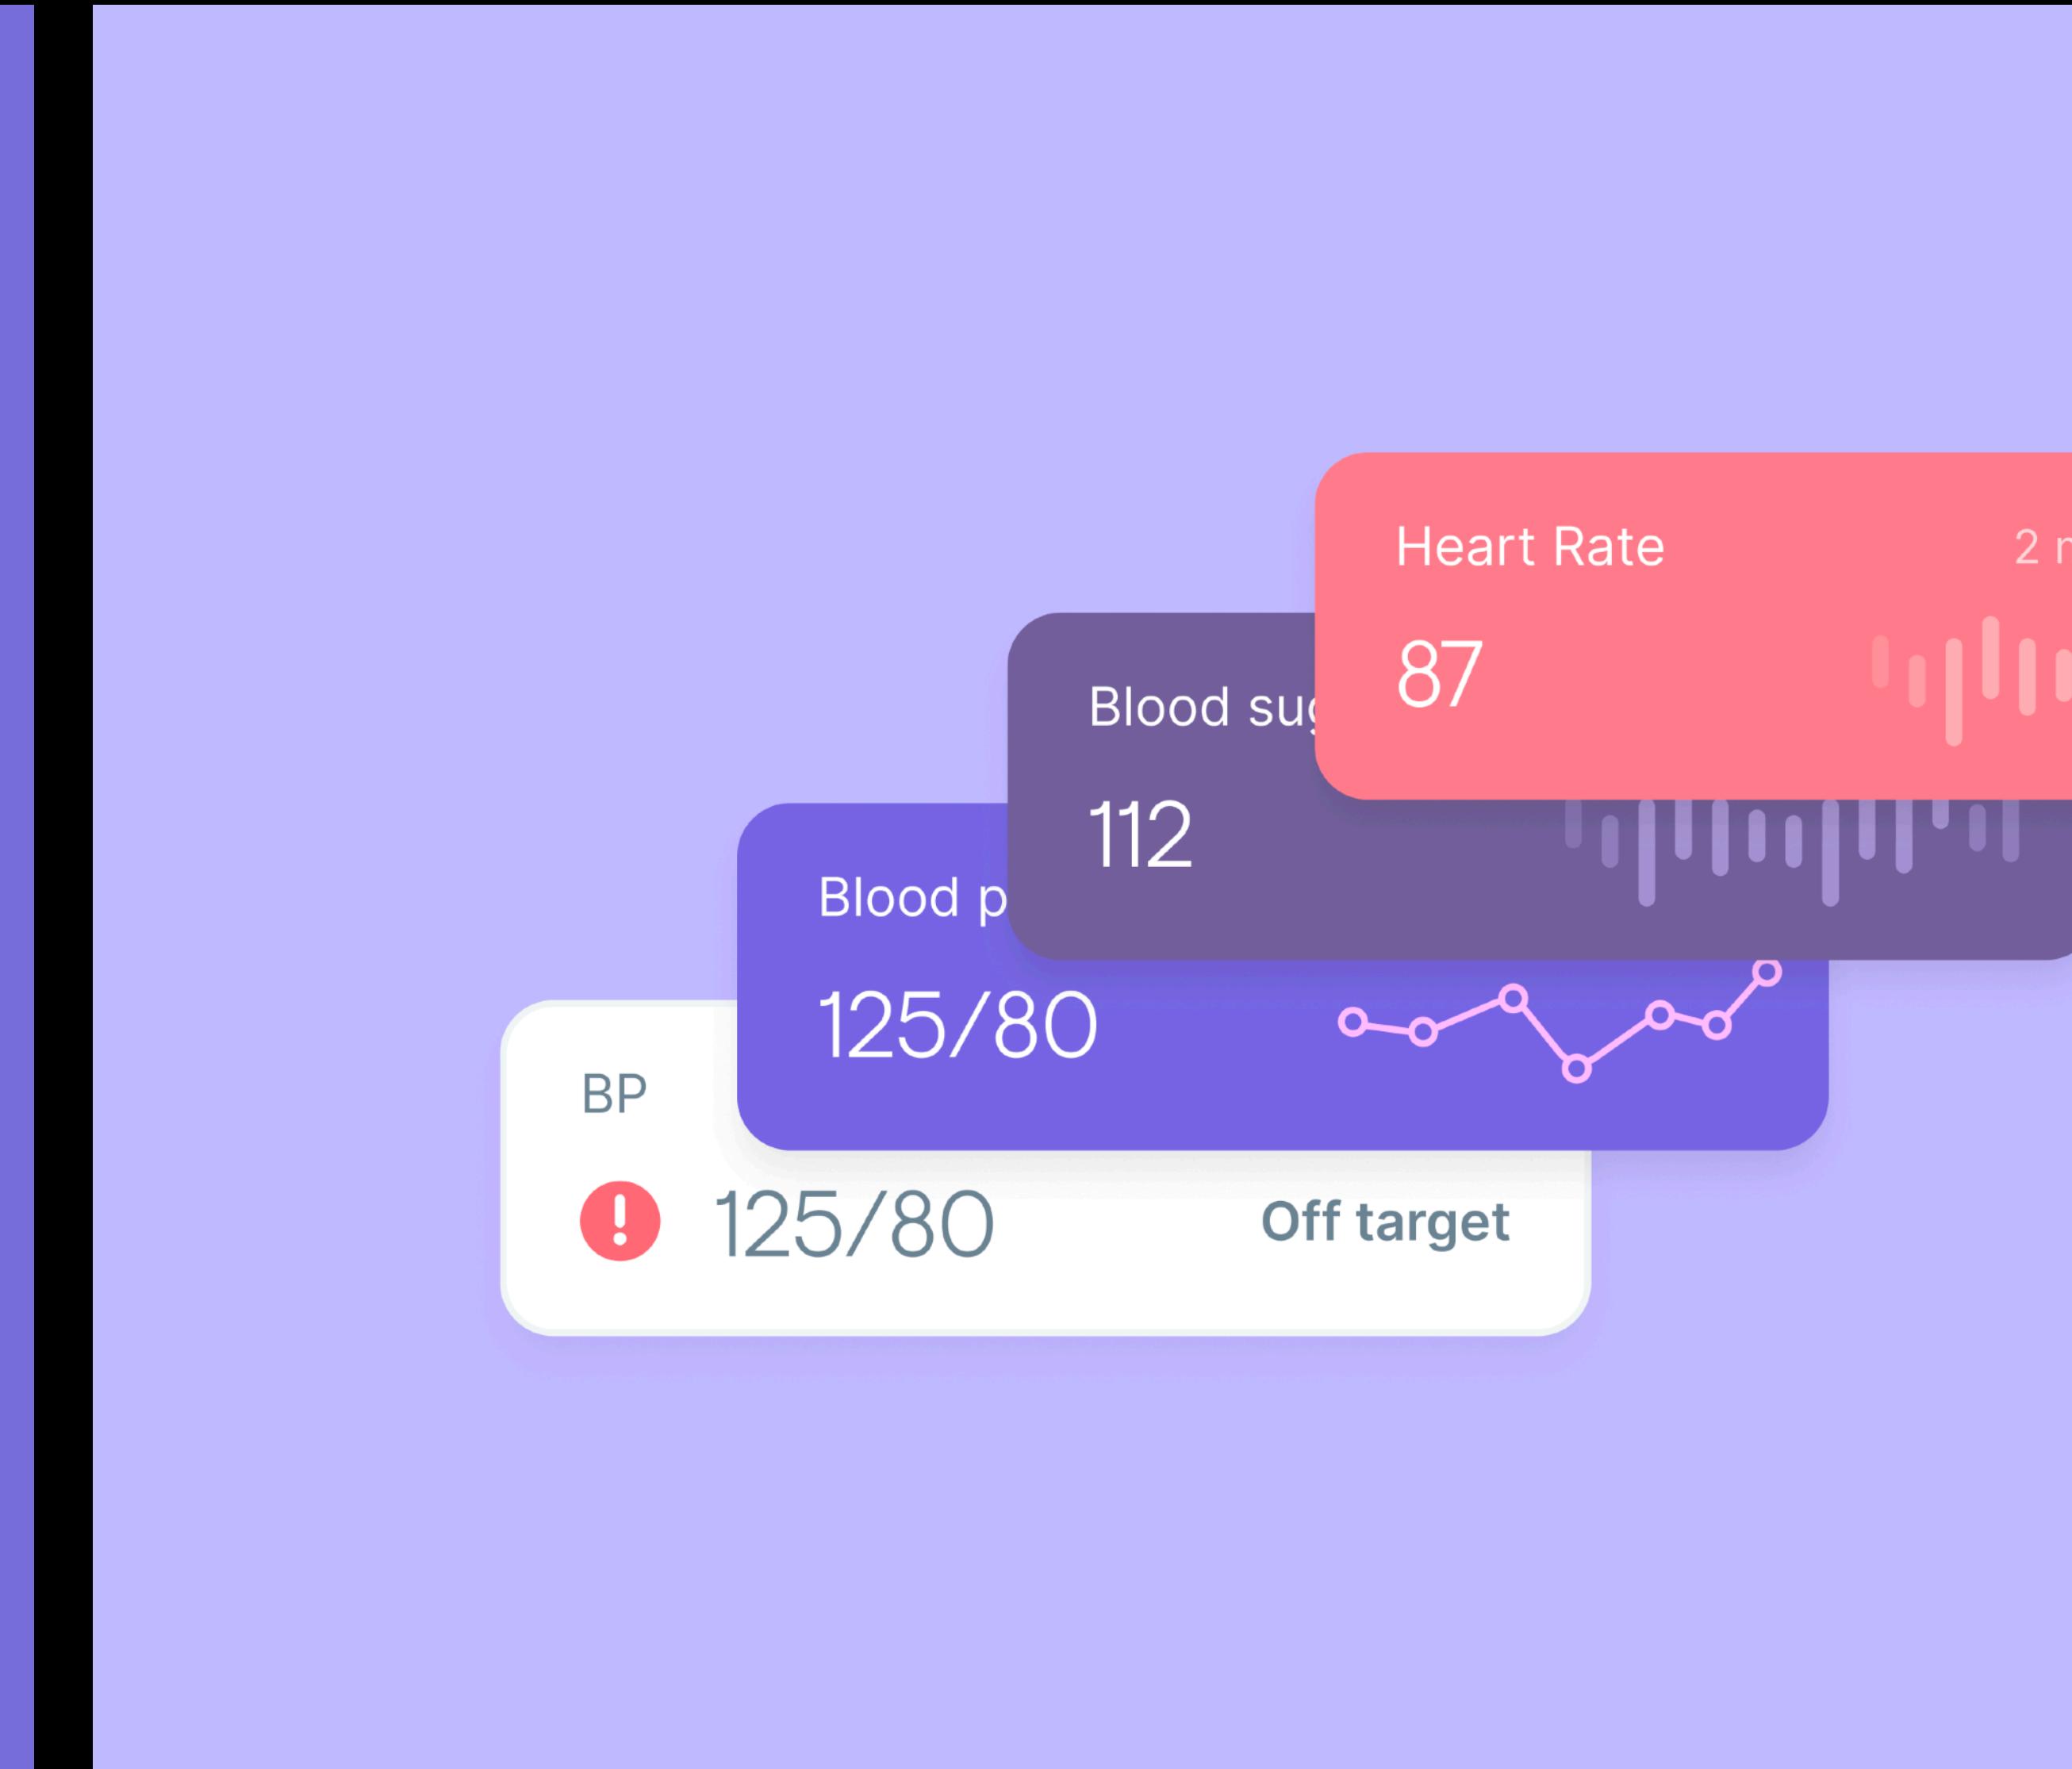

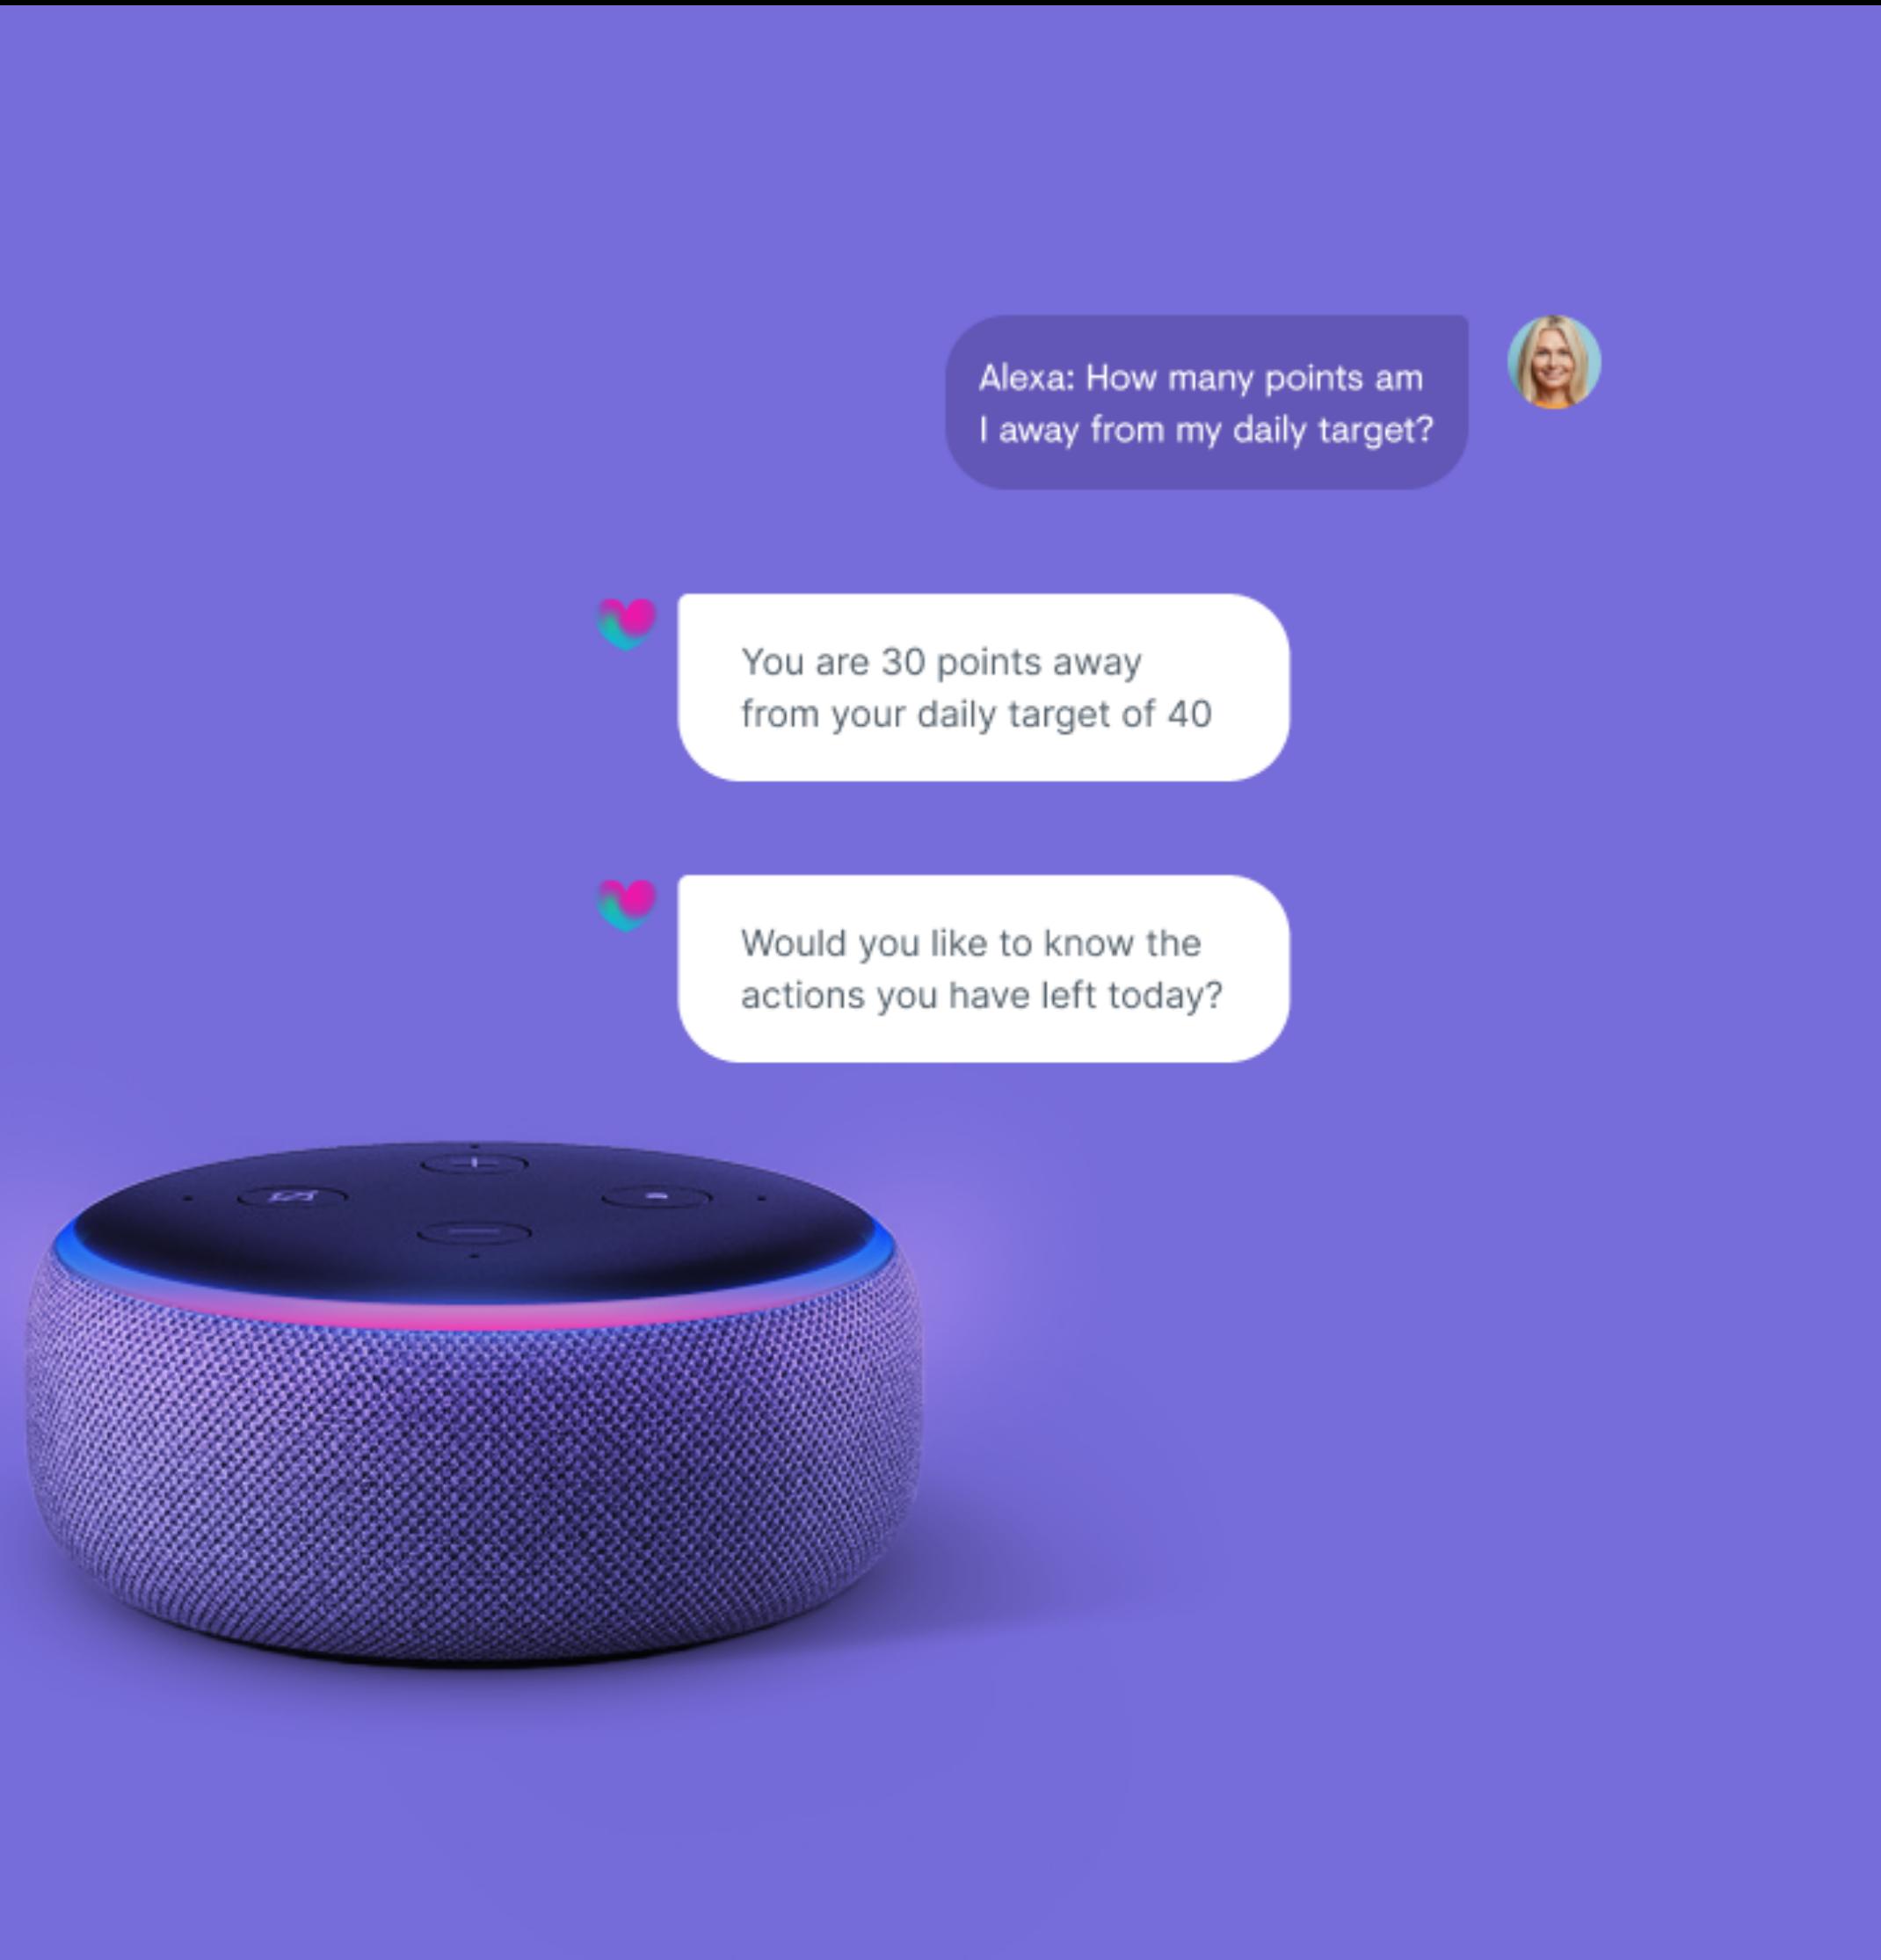

## Babylon DNA - Design System

UI component libraries and new visual language reduced the lead time from idea to code in 20% - cost savings estimated in 3 million pounds per year with front-end development.

## Babylon 360 - Service strategy & prototype

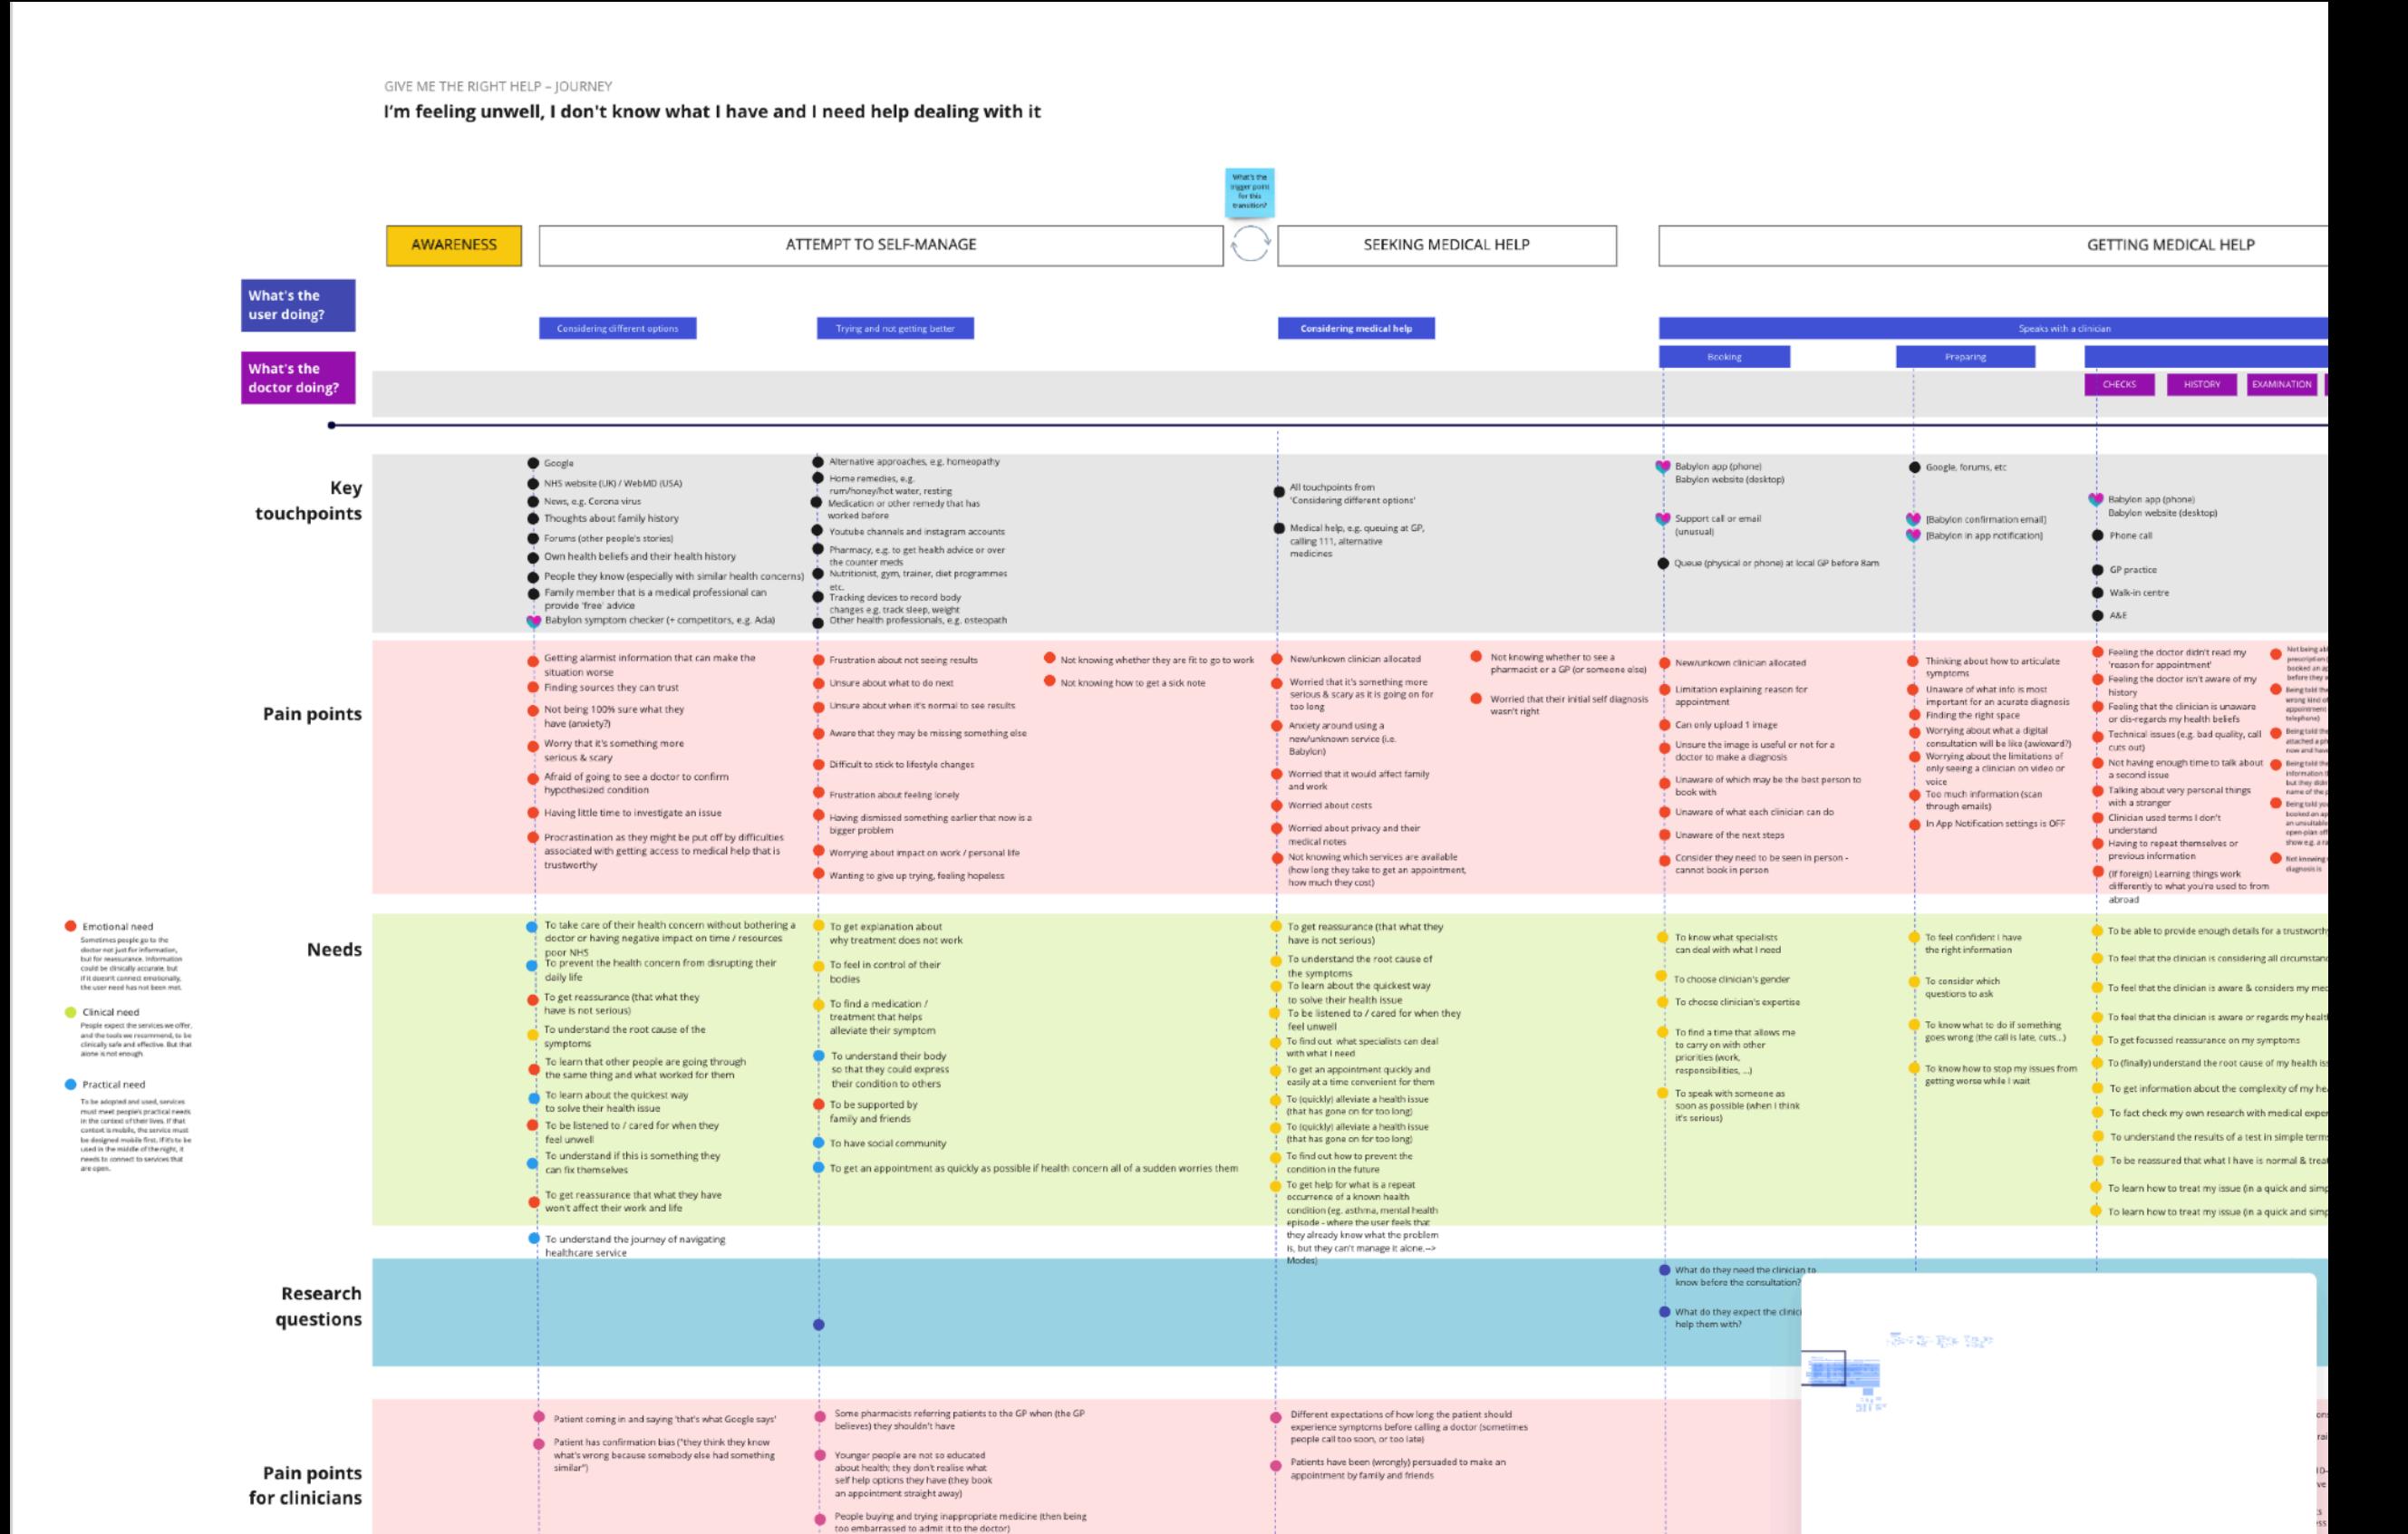

To adapt to a new market and funding model, a new digital service focused on patients with chronic conditions was developed.

The work enabled the go to market strategy in the US, with the pilot supporting thousands of patients.

# Maps and principles

With the foundations in place, we used Service Design to map all the journeys, break silos and help people to connect with the right specialists. We documented the experience principles based on research studies, and evolved the visual language to improve accessibility.

## Personal.

We'll get to know you personally - we don't believe in one-size-fits-all experiences

## Empowering.

We enable our members with positive insights to act on their health. We're not fatalistic.

## Simple.

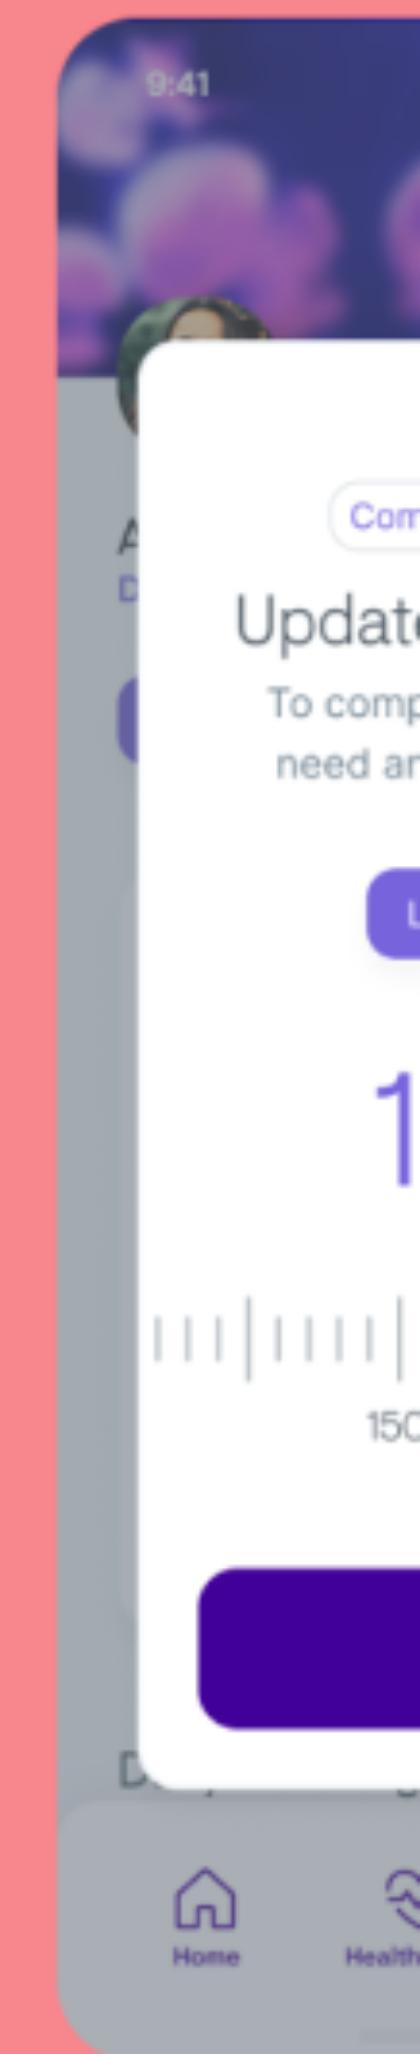

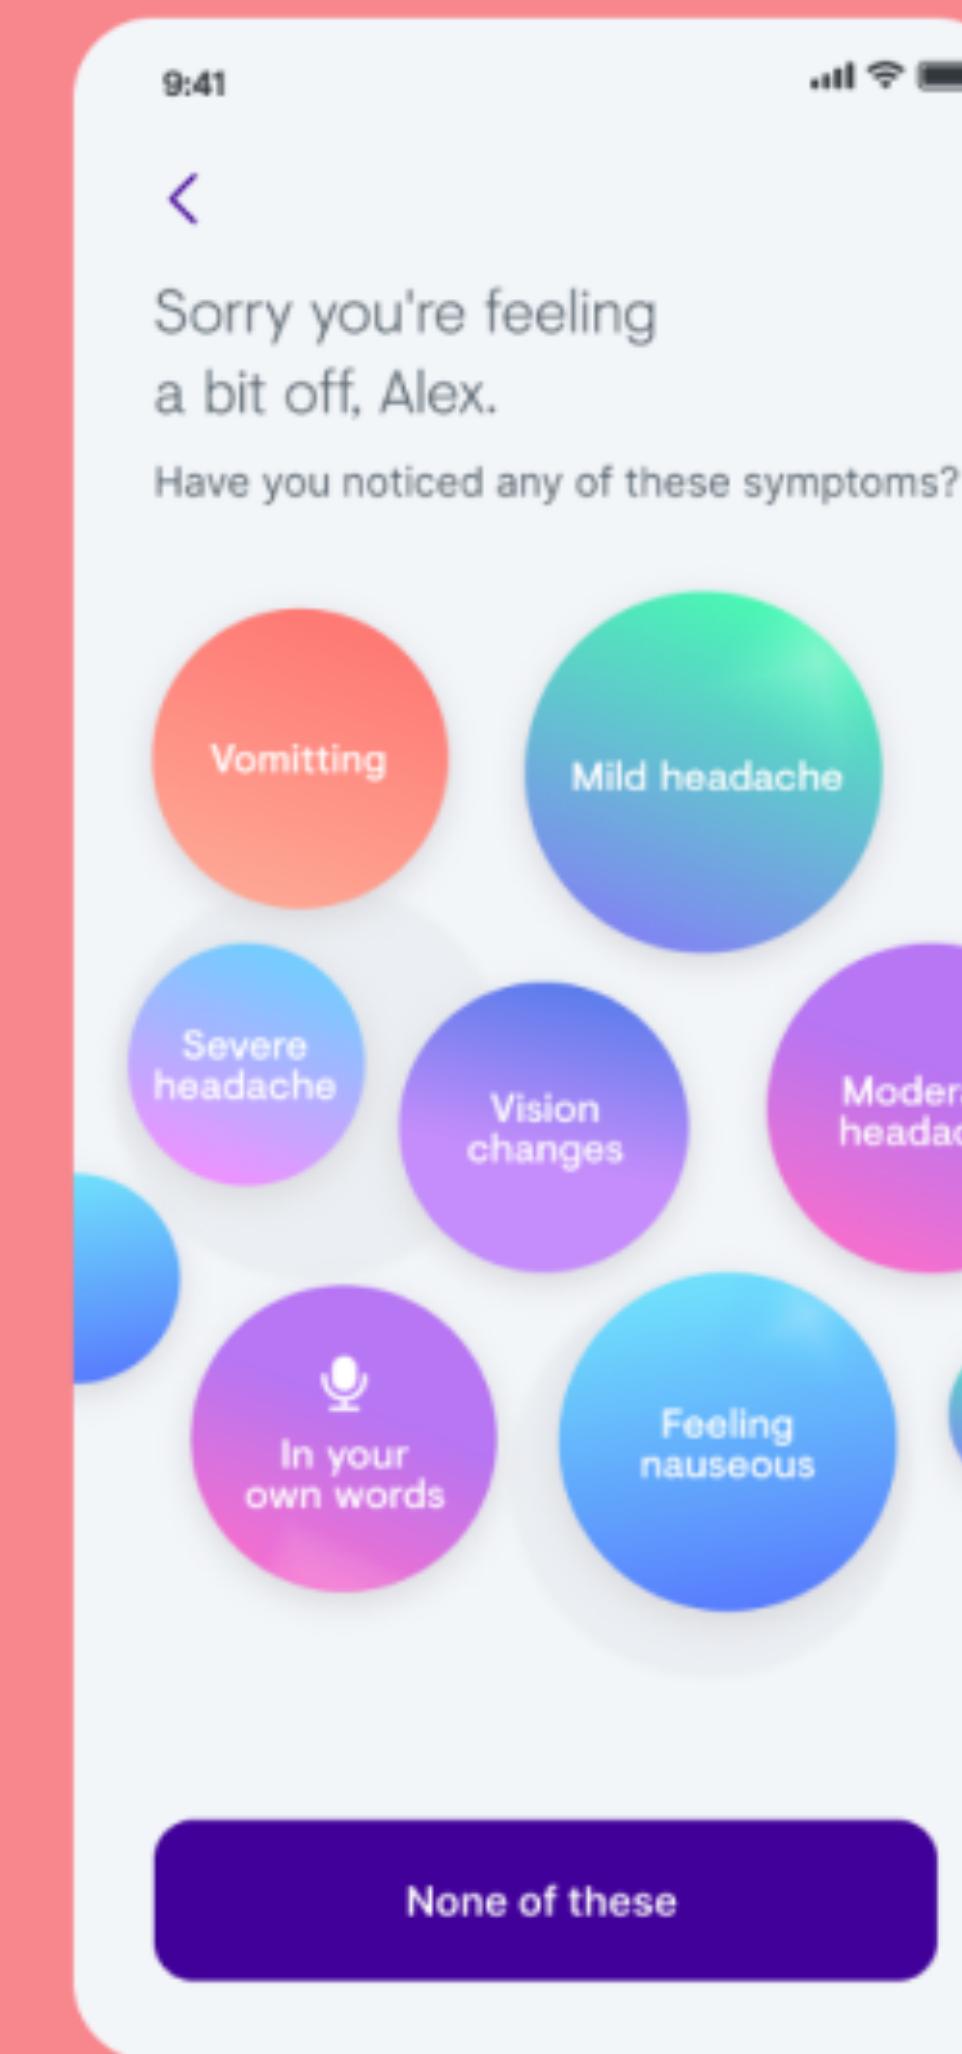

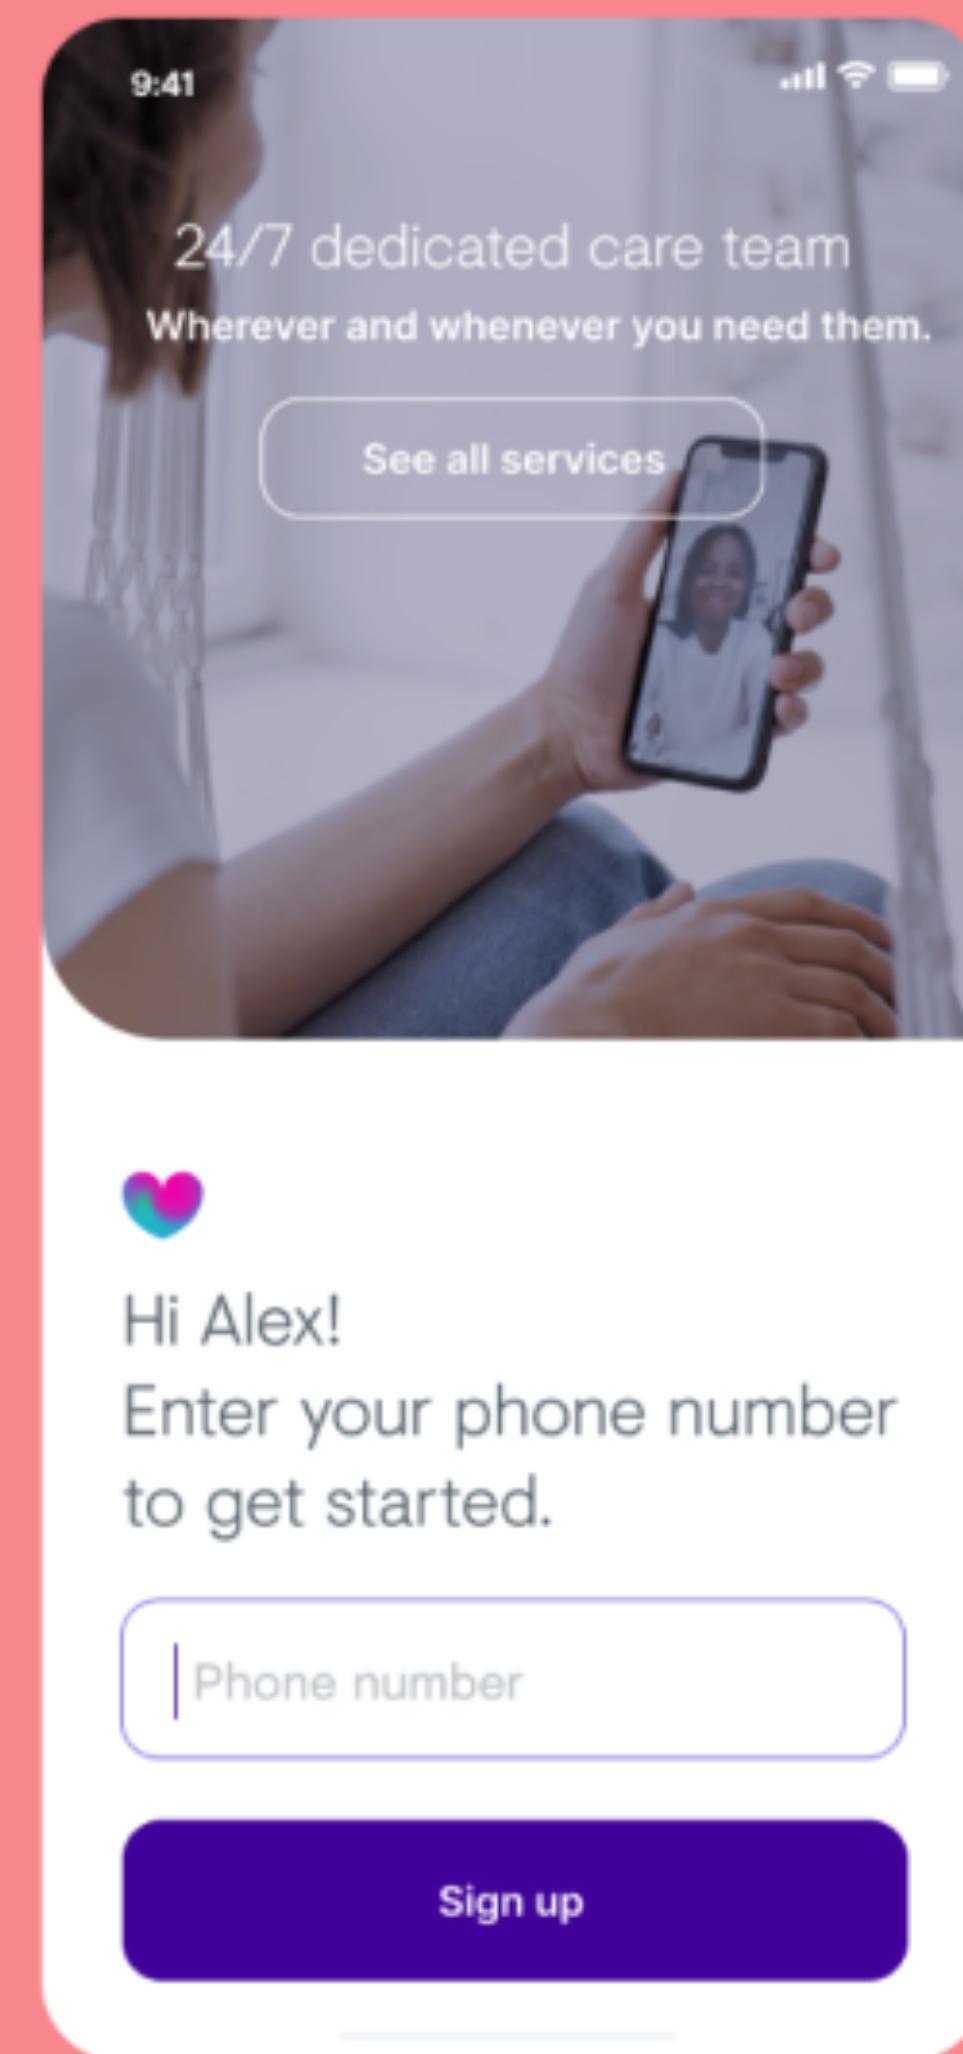

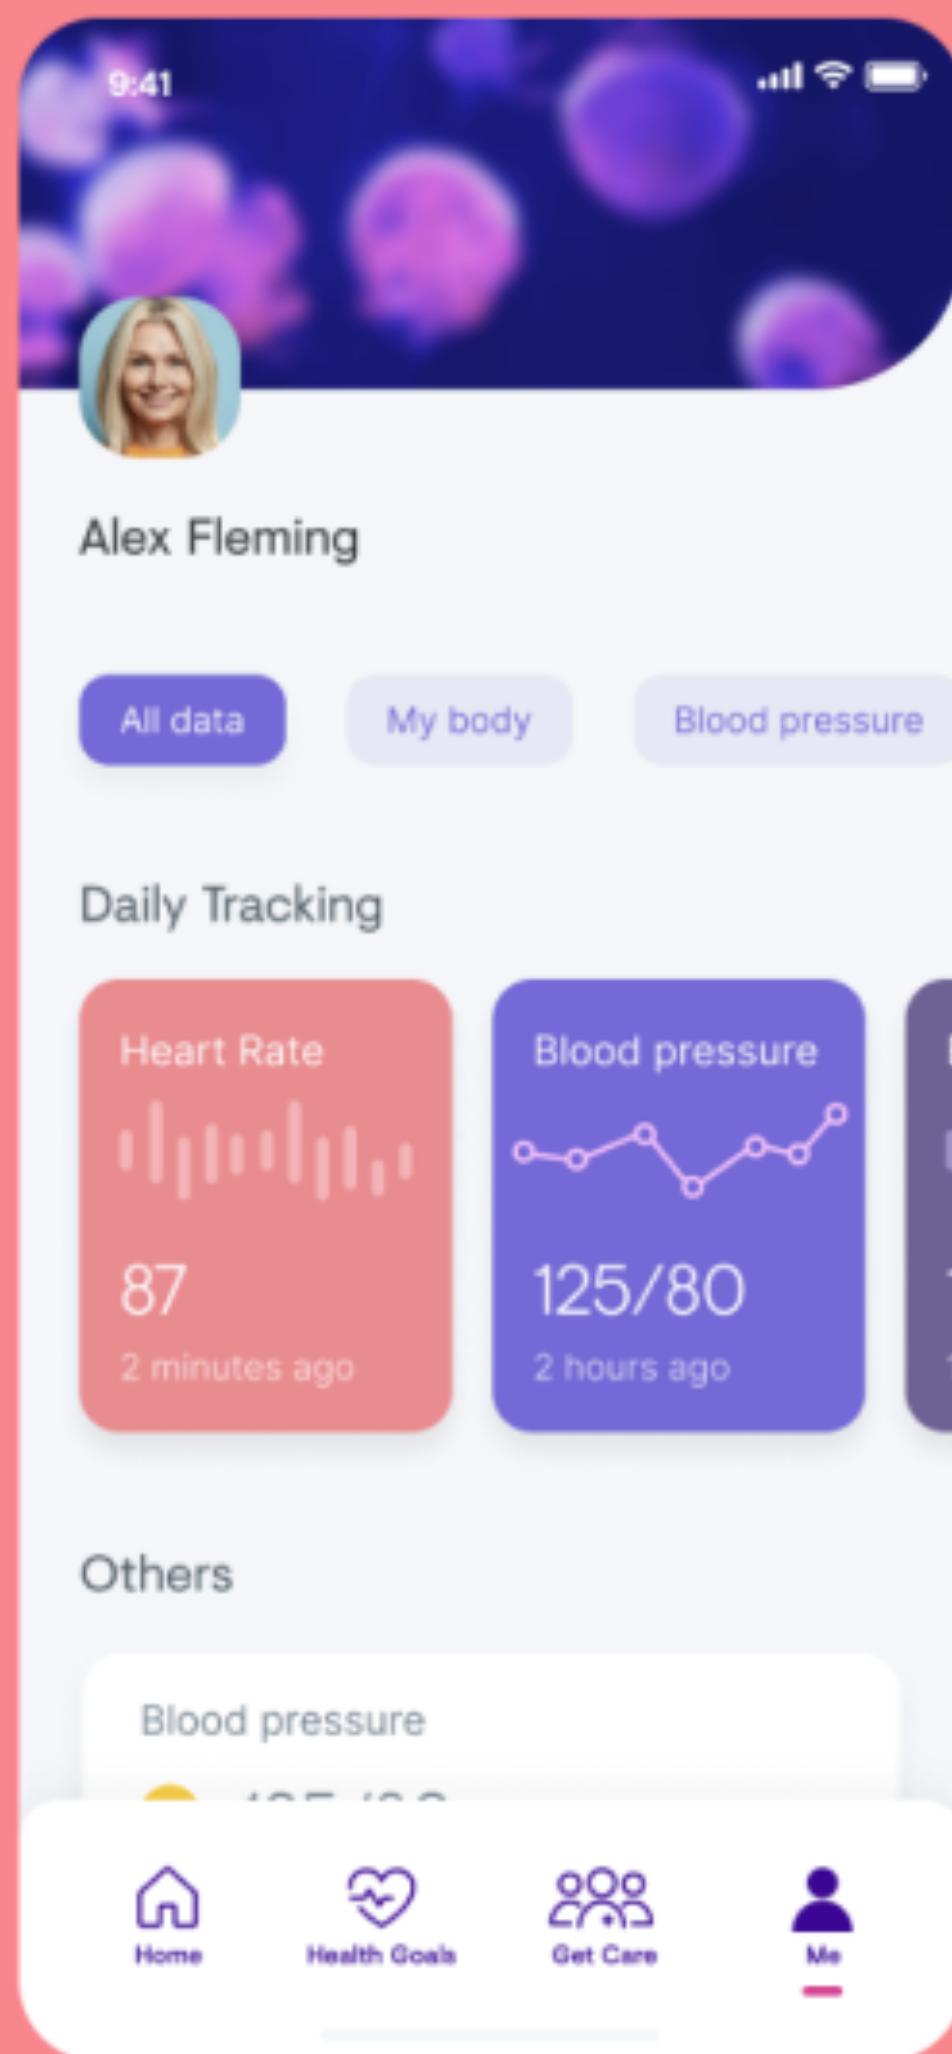

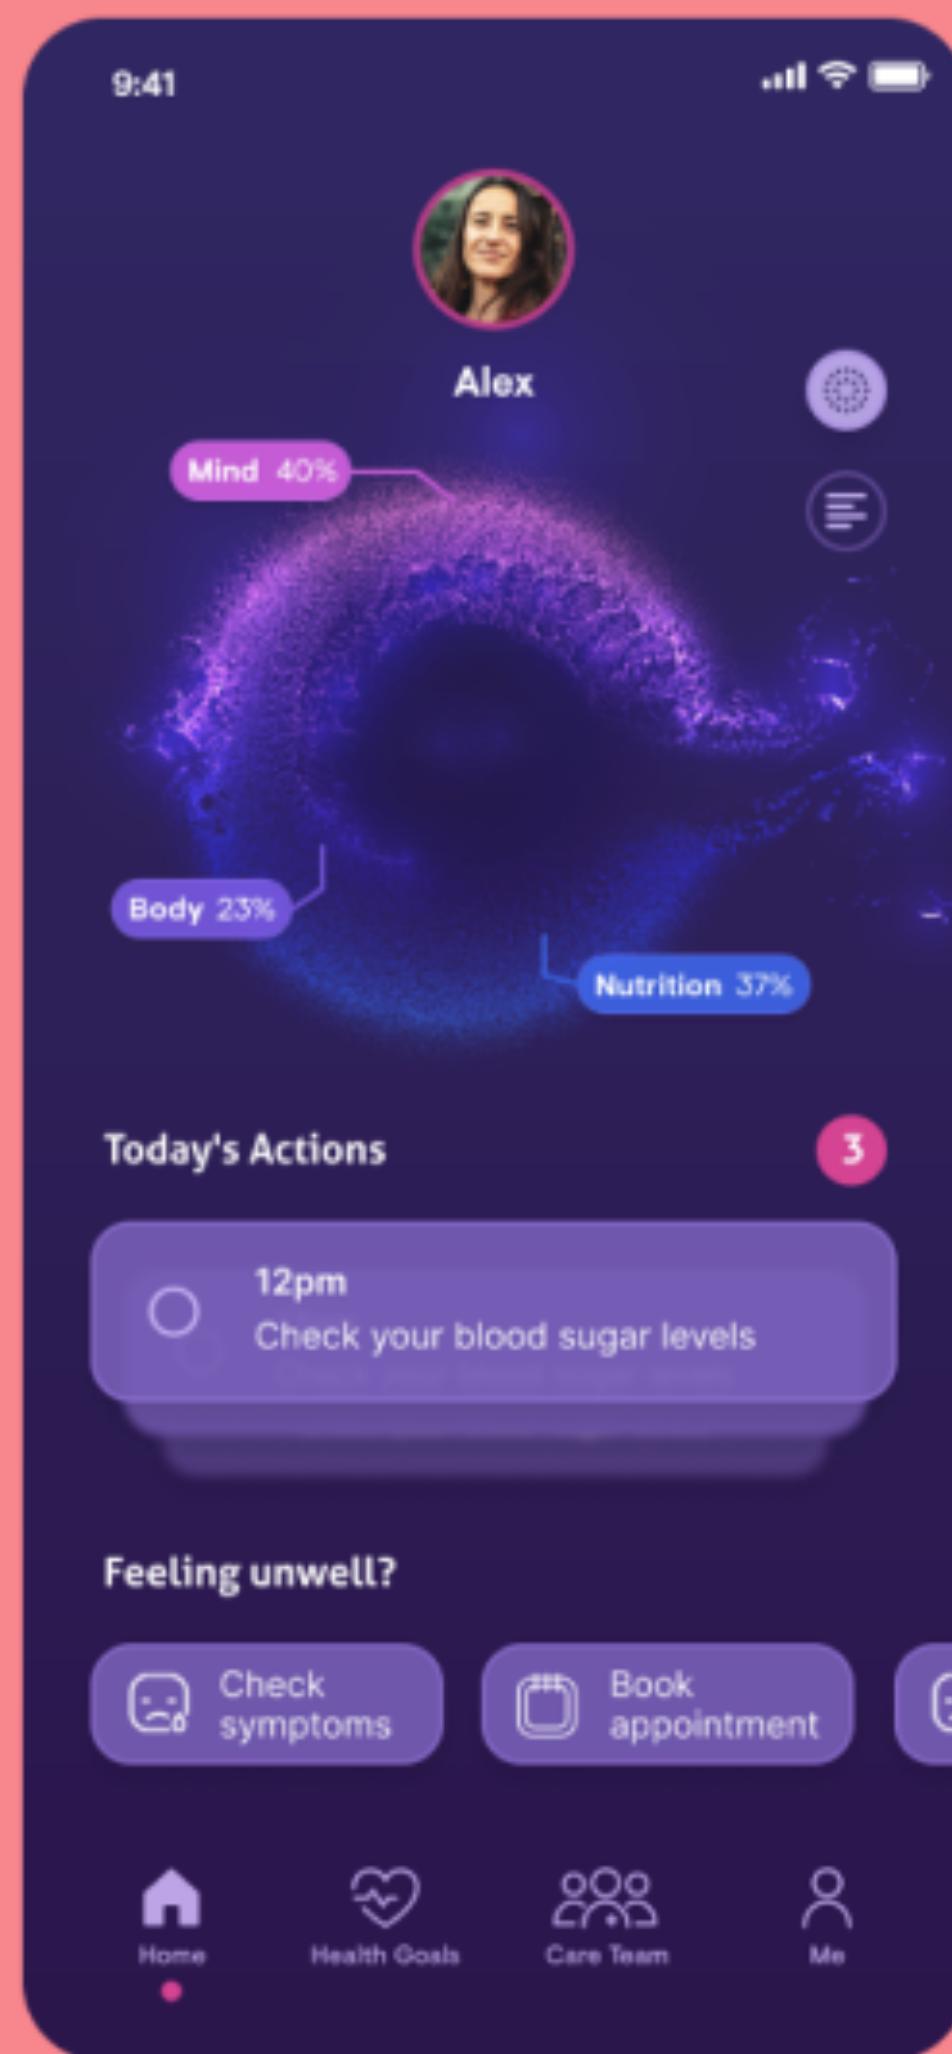

We support members with intelligent, clear actions. We remove the noise.

## Inclusive.

Our service feels welcoming, empathetic and conversational - we won't forget you

## Human.

People care for you, and people write our algorithms - it should feel that way

# Lloyds Bank

Lloyds Banking Group is the UK largest UK retail and commercial financial services provider, with 26 million customers and a leading digital presence.

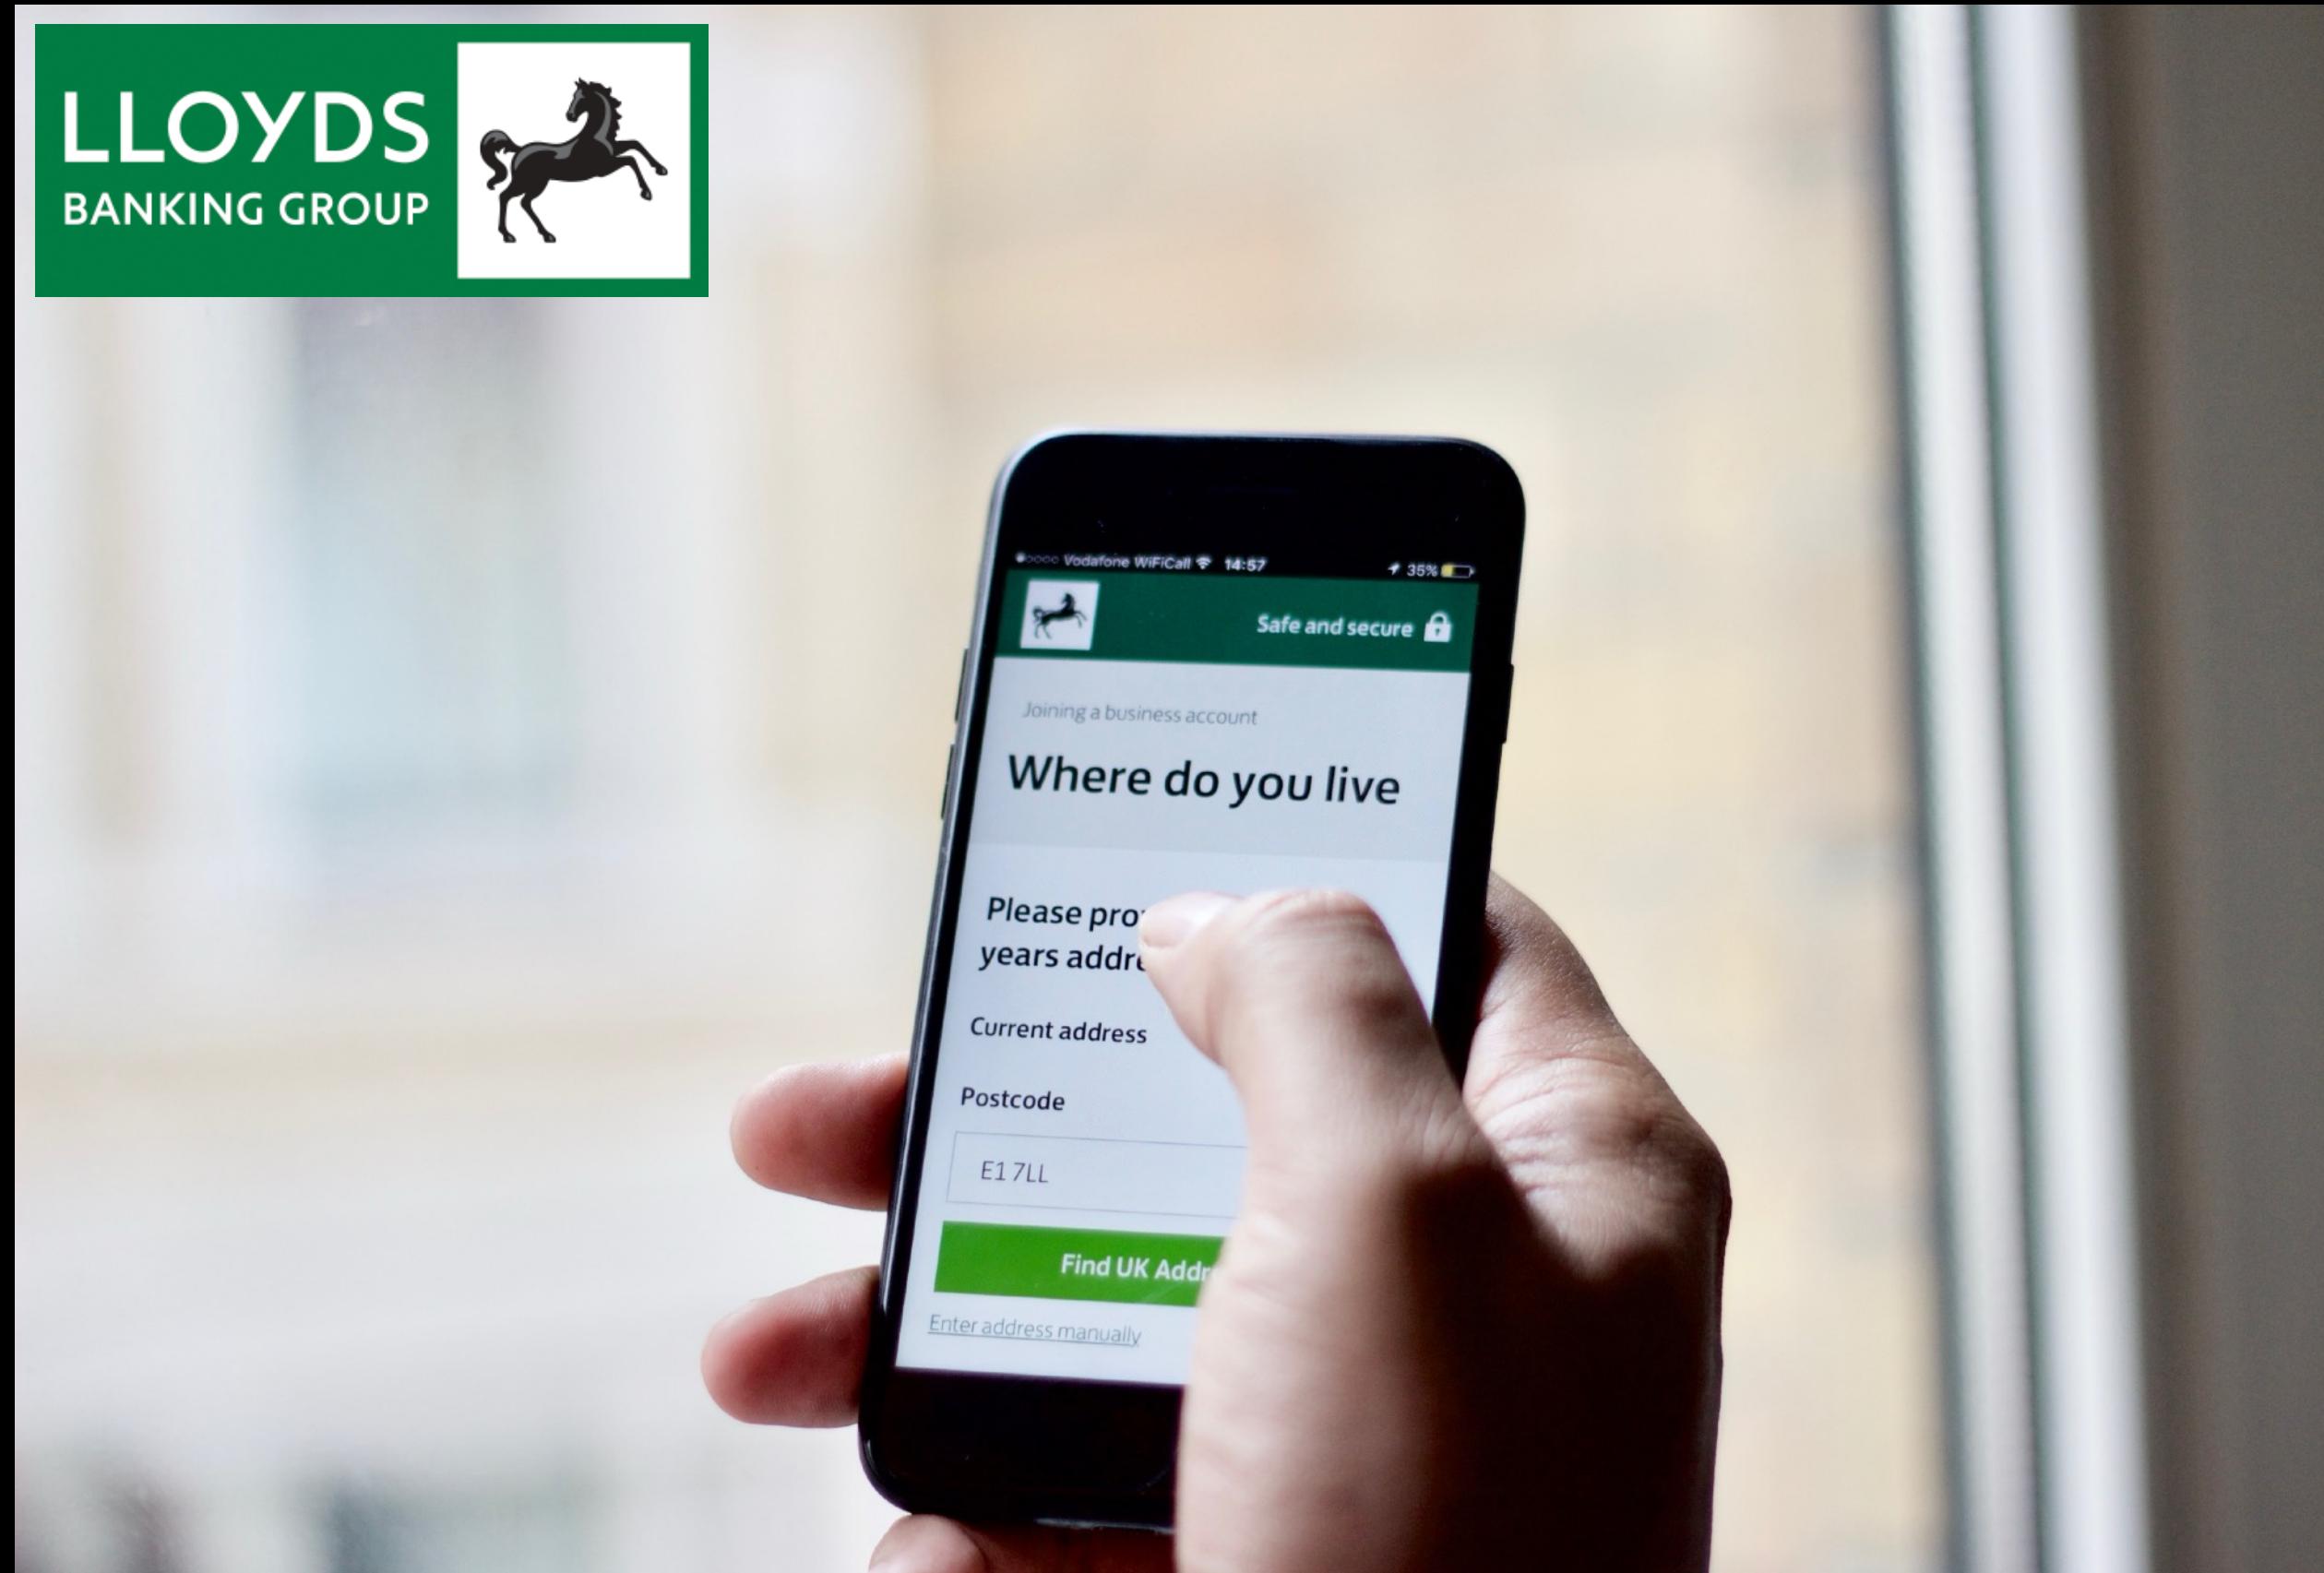

I have joined the company digital transformation program to initiate the journey redesigns for Commercial Banking.

After redesigning the onboarding process, we addressed all interactions that were cost intensive for the company, internally named as Commercial Servicing.

One of the most complex parts of this is to securely provide authorisations for groups to manage accounts.

This stream of work is live, and it reduced the average time for adding a party to an existing account from 23 days to 12 hours.

# Lloyds Banking Group

Monzo, N26 and fintechs changed the paradigm of mobile banking. But propositions for business users weren't there yet when we started the product strategy.

Lloyds invested mainly in 3 areas in this project: making it easy to onboard a second party, and assigning the right permissions, reducing the number of calls with interactions that were not available in the internet banking due to complexity and trialing automation and machine learning to support the account managers.

Elements of privacy, fraud reduction and security make this work complex and remarkable.

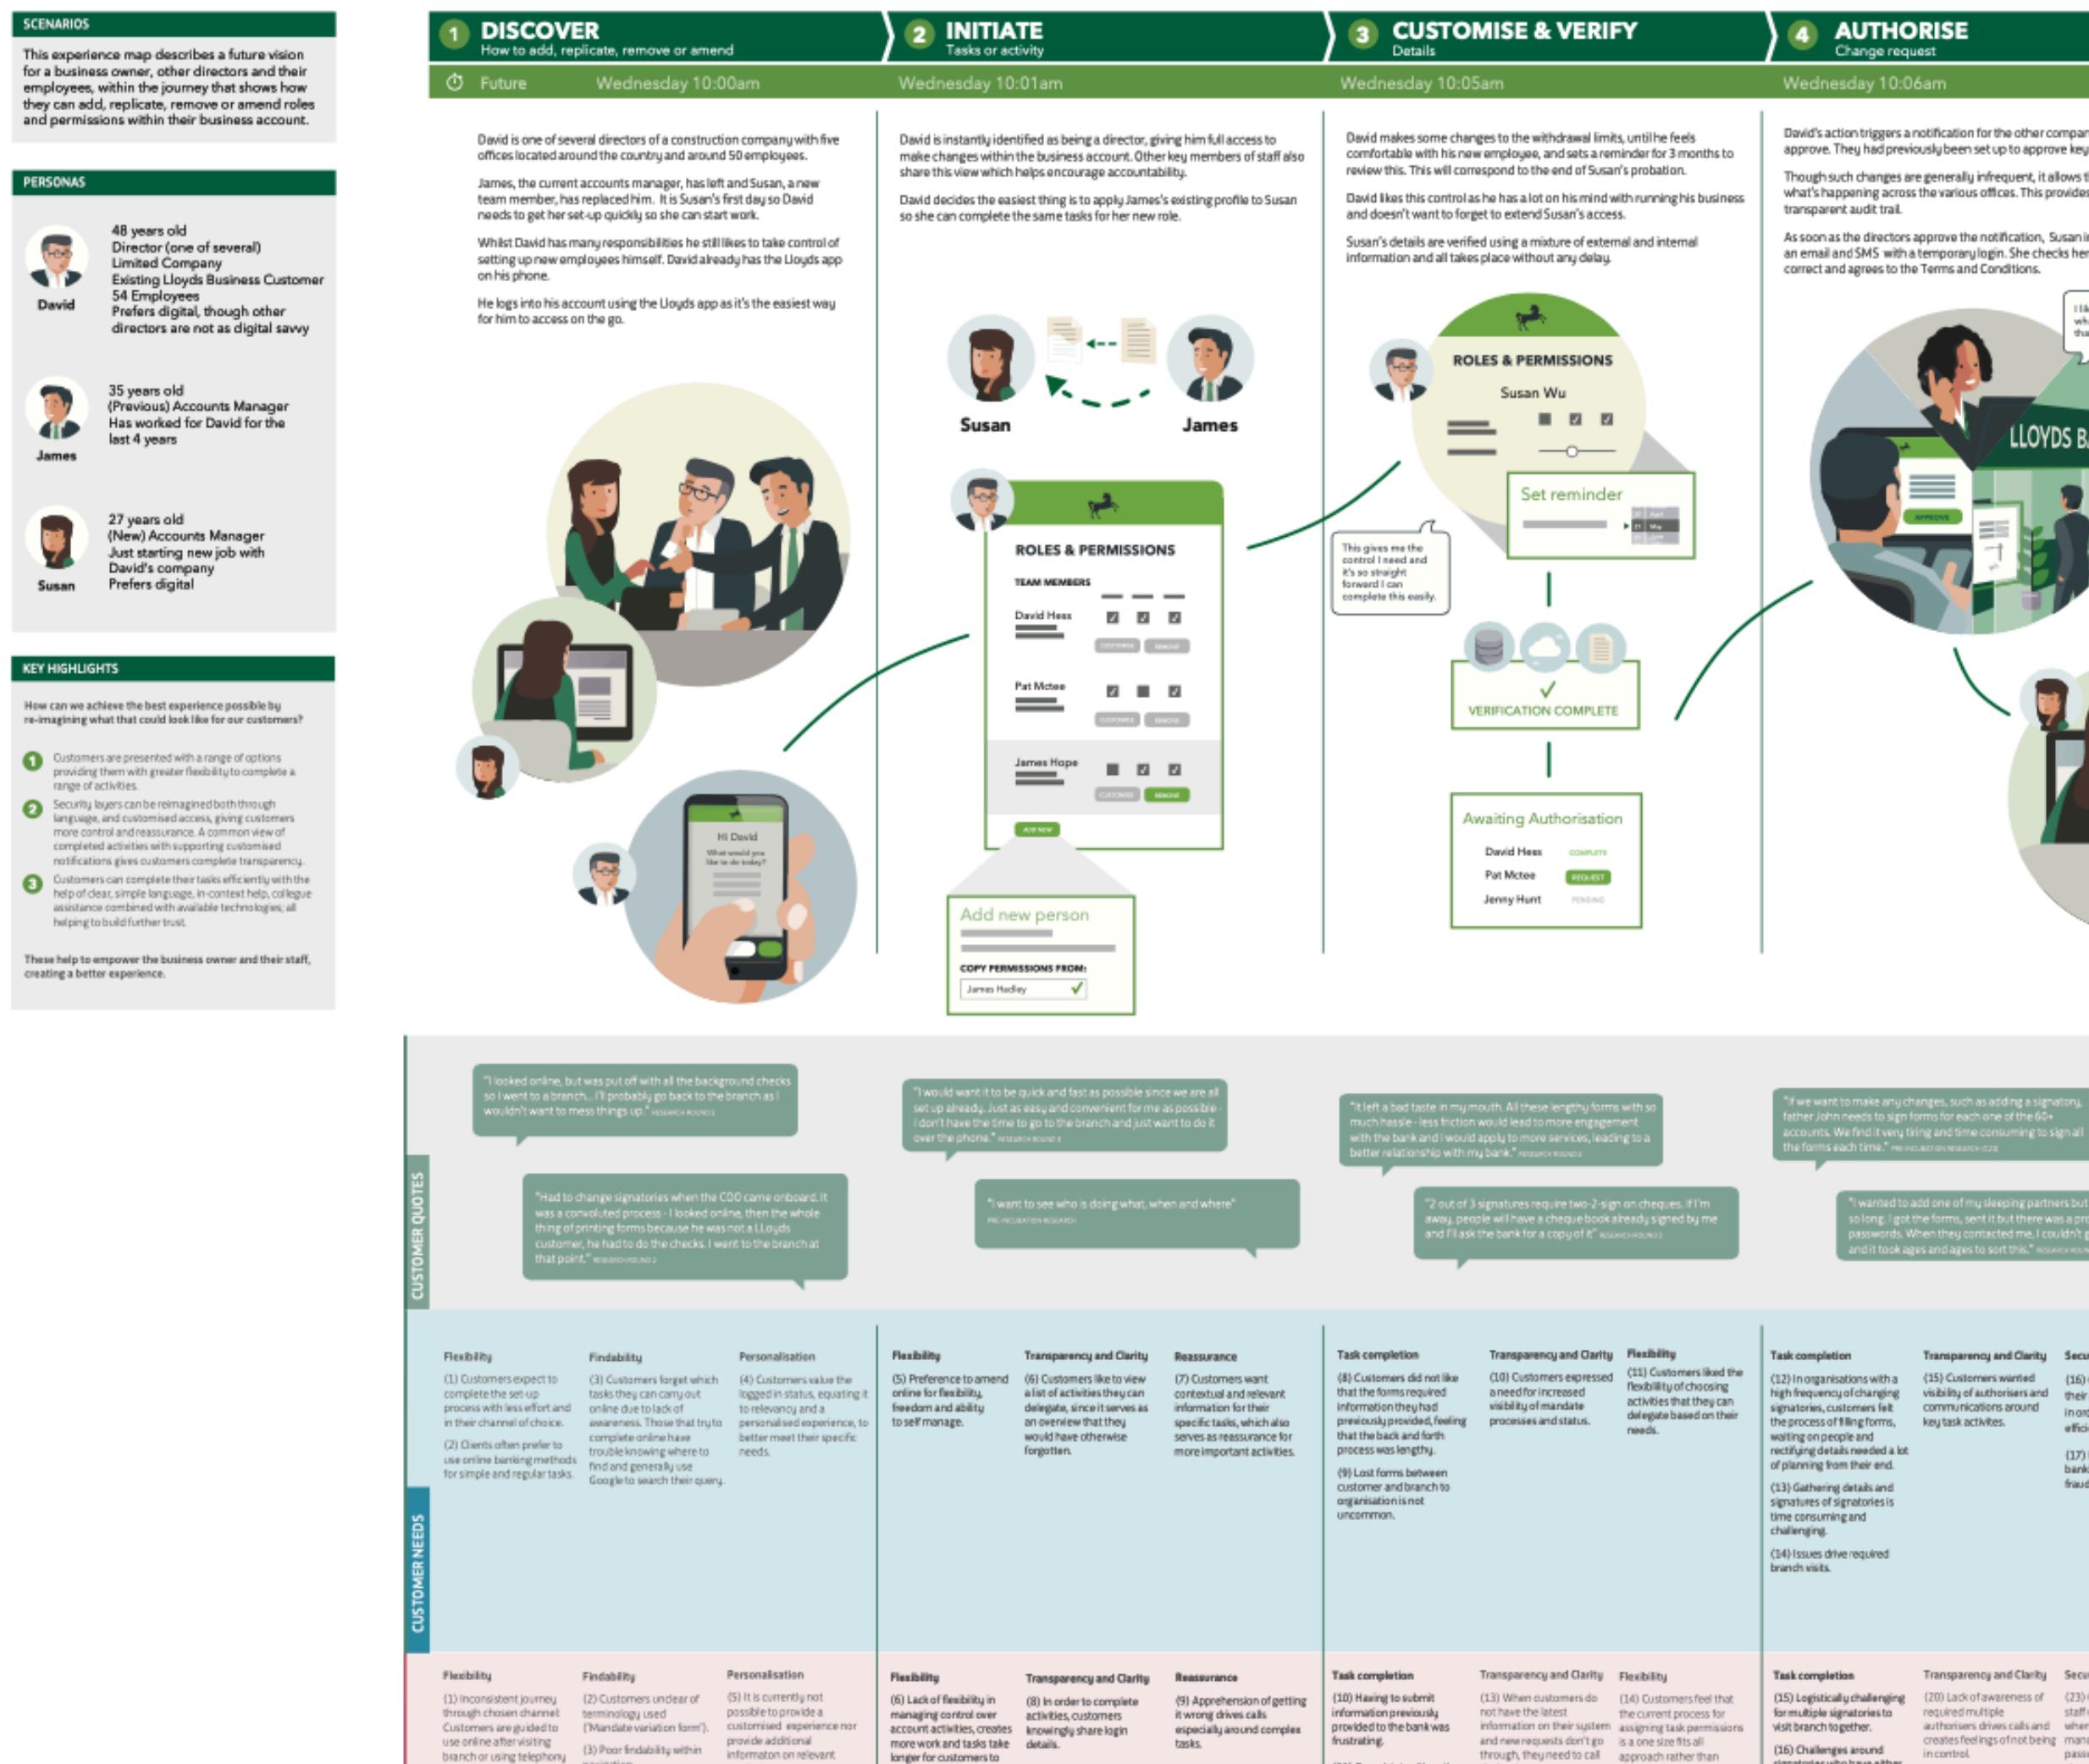

As the CX/XD Lead, I partnered with the Engineering Director, Product Lead and a Delivery Lead since the inception and discovery phase.

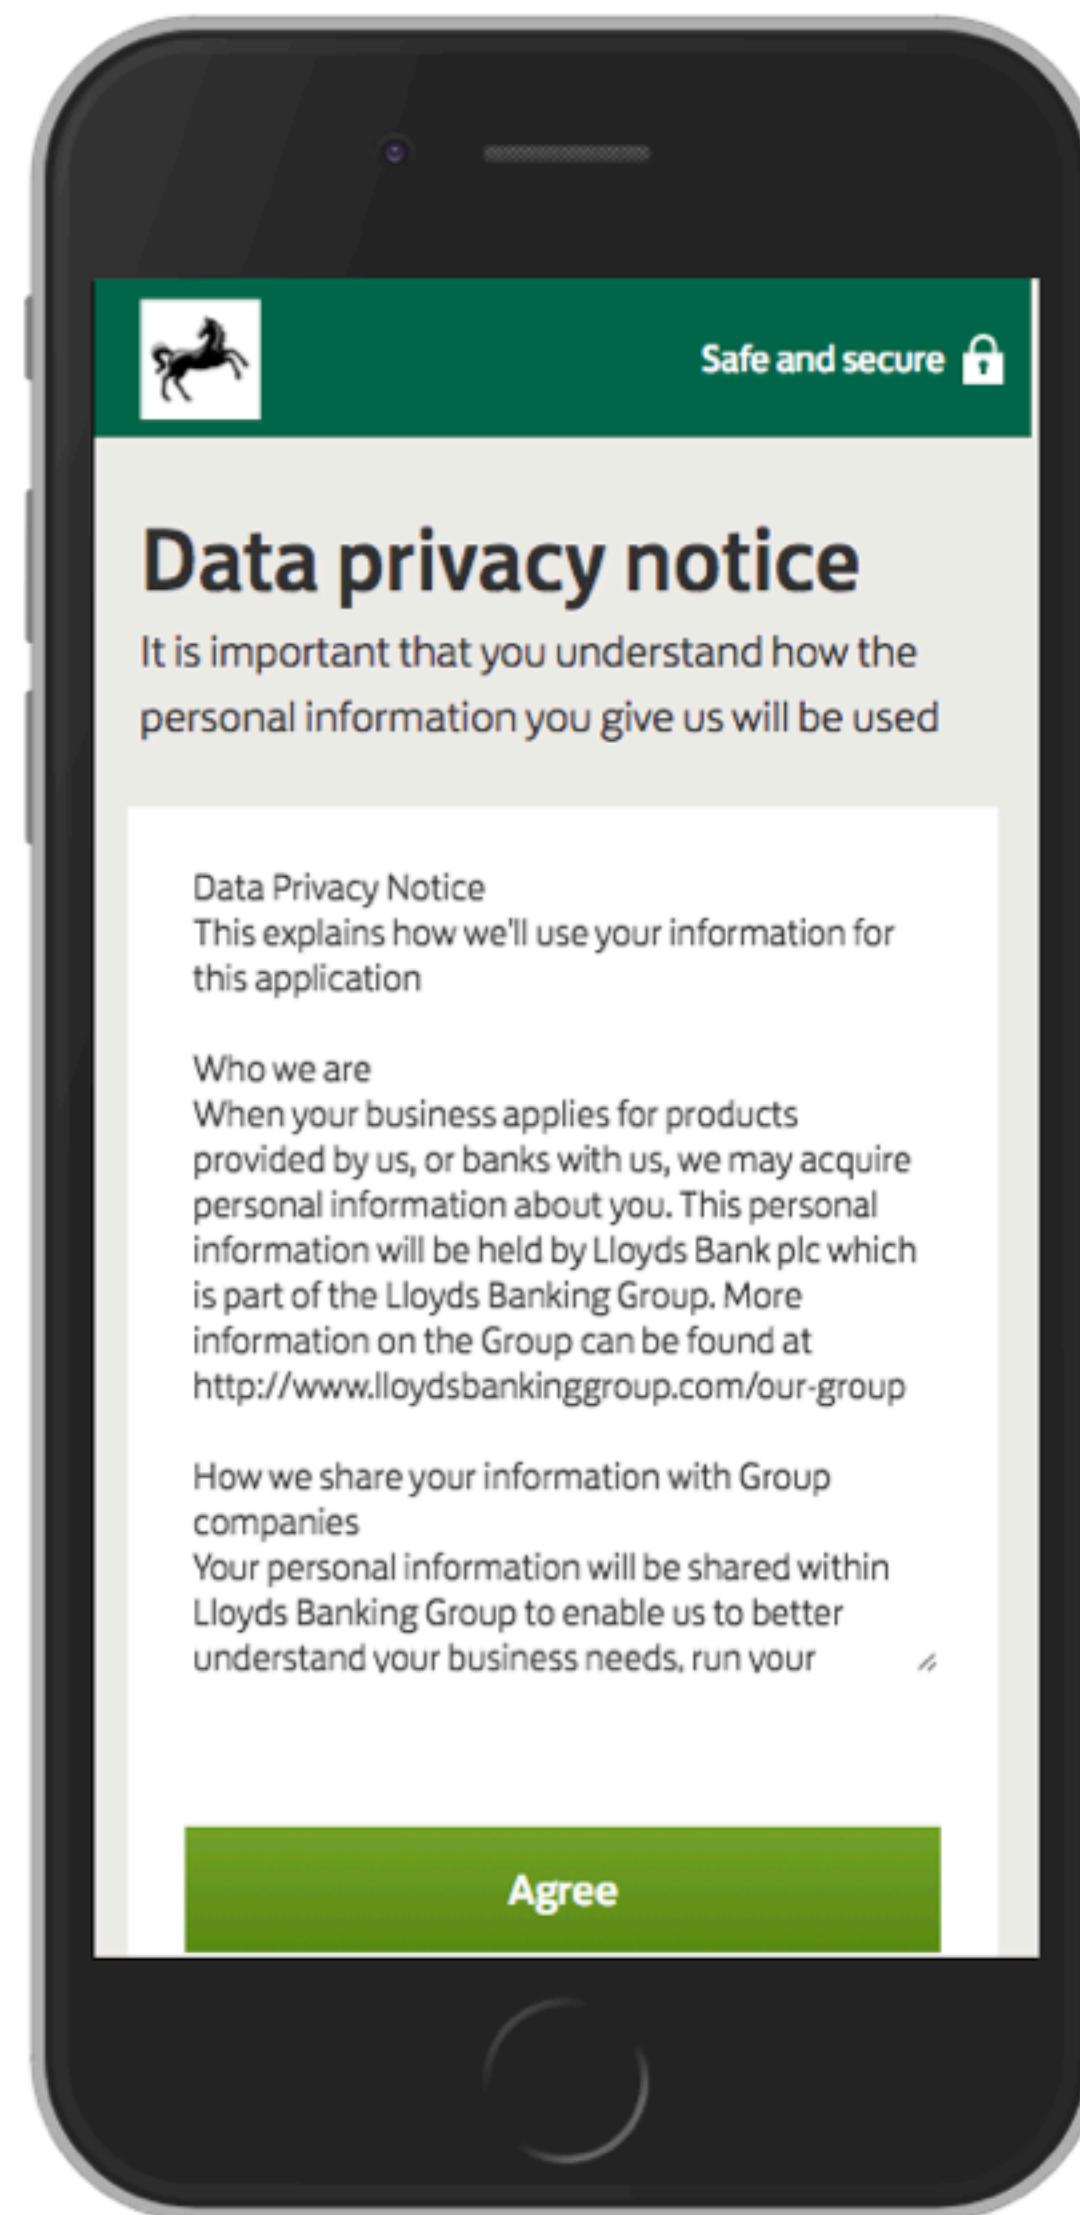

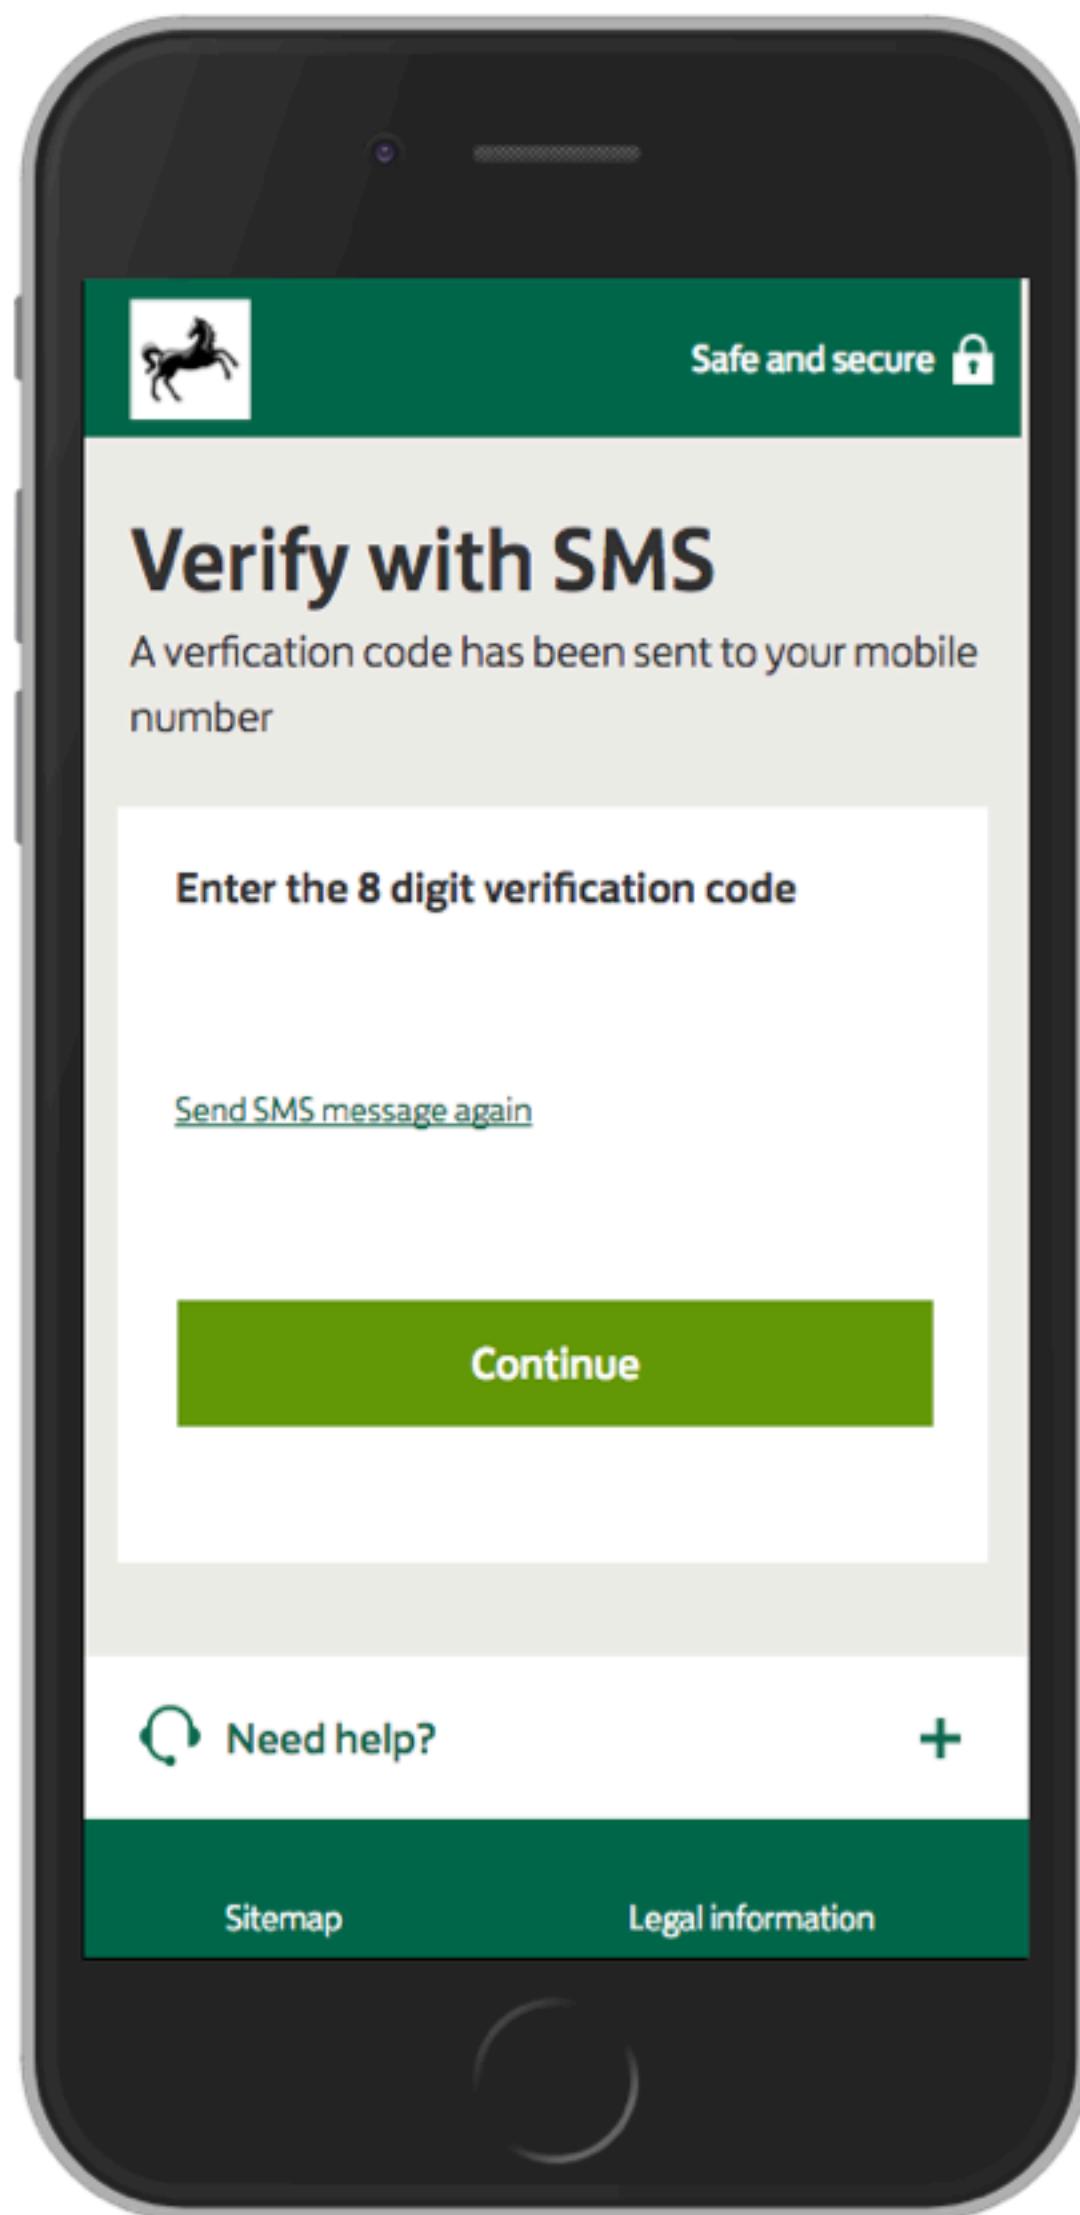

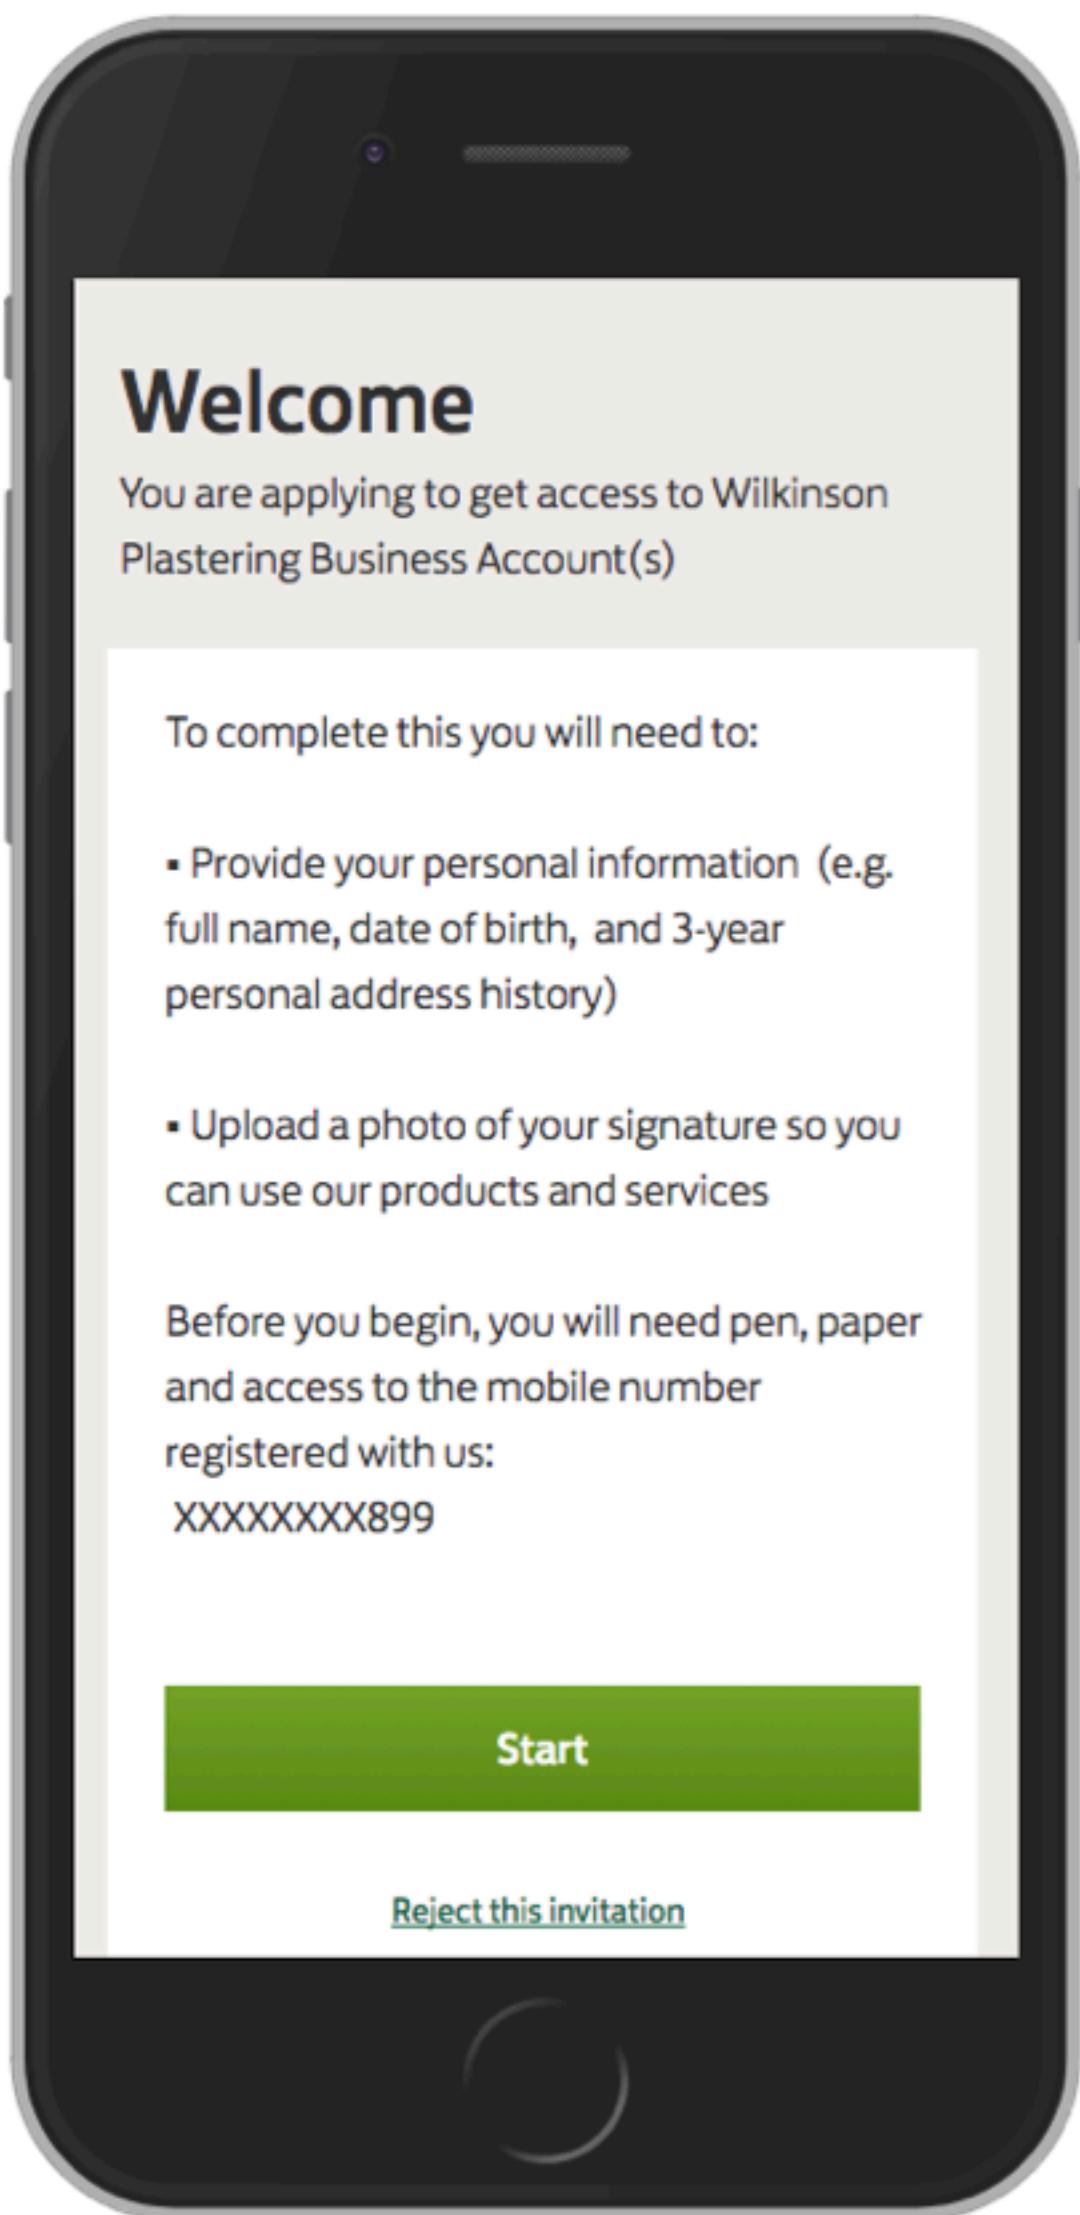

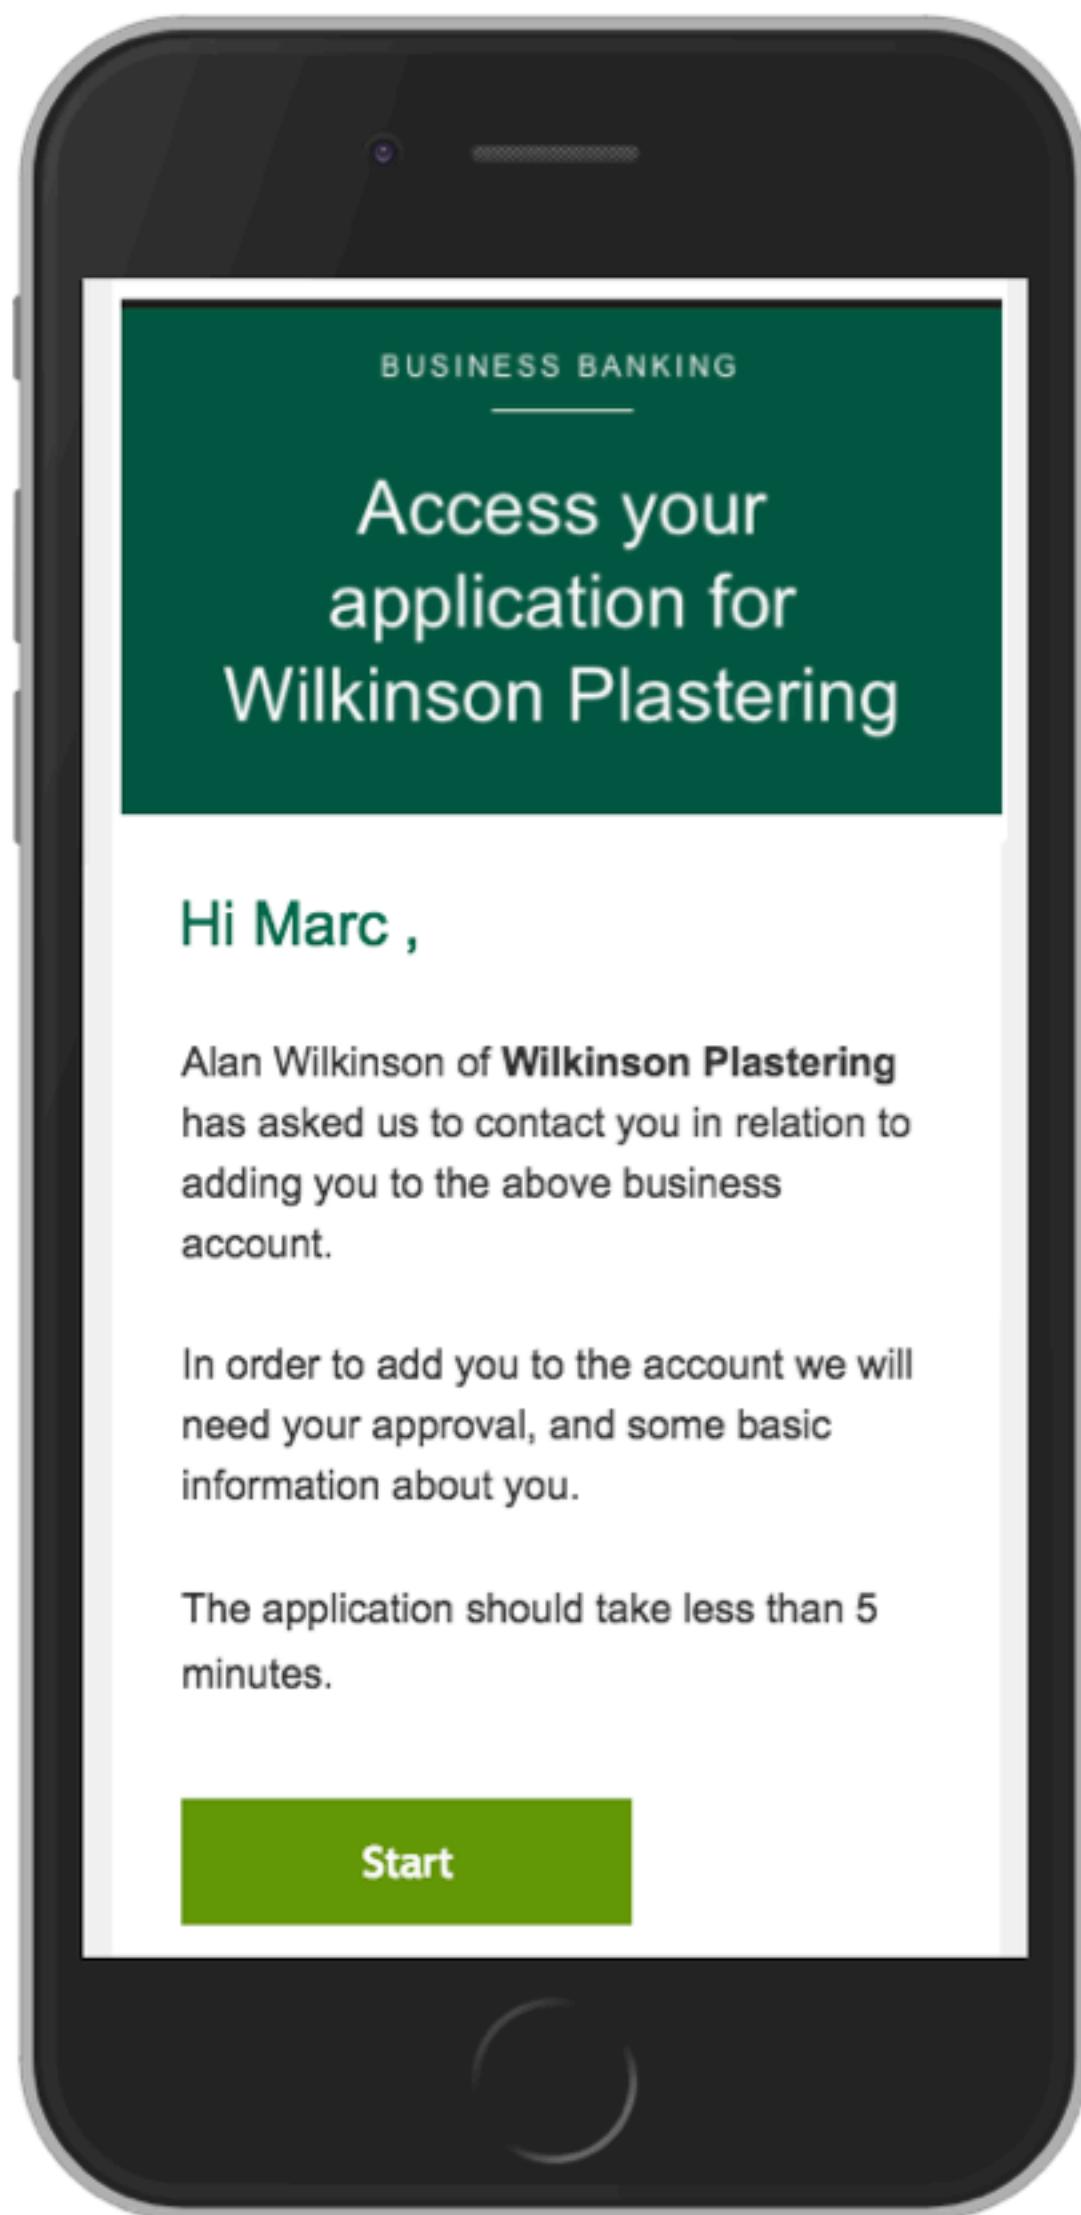

Later, I build the team of designers to support all three journeys, and designed the roles and permission service.

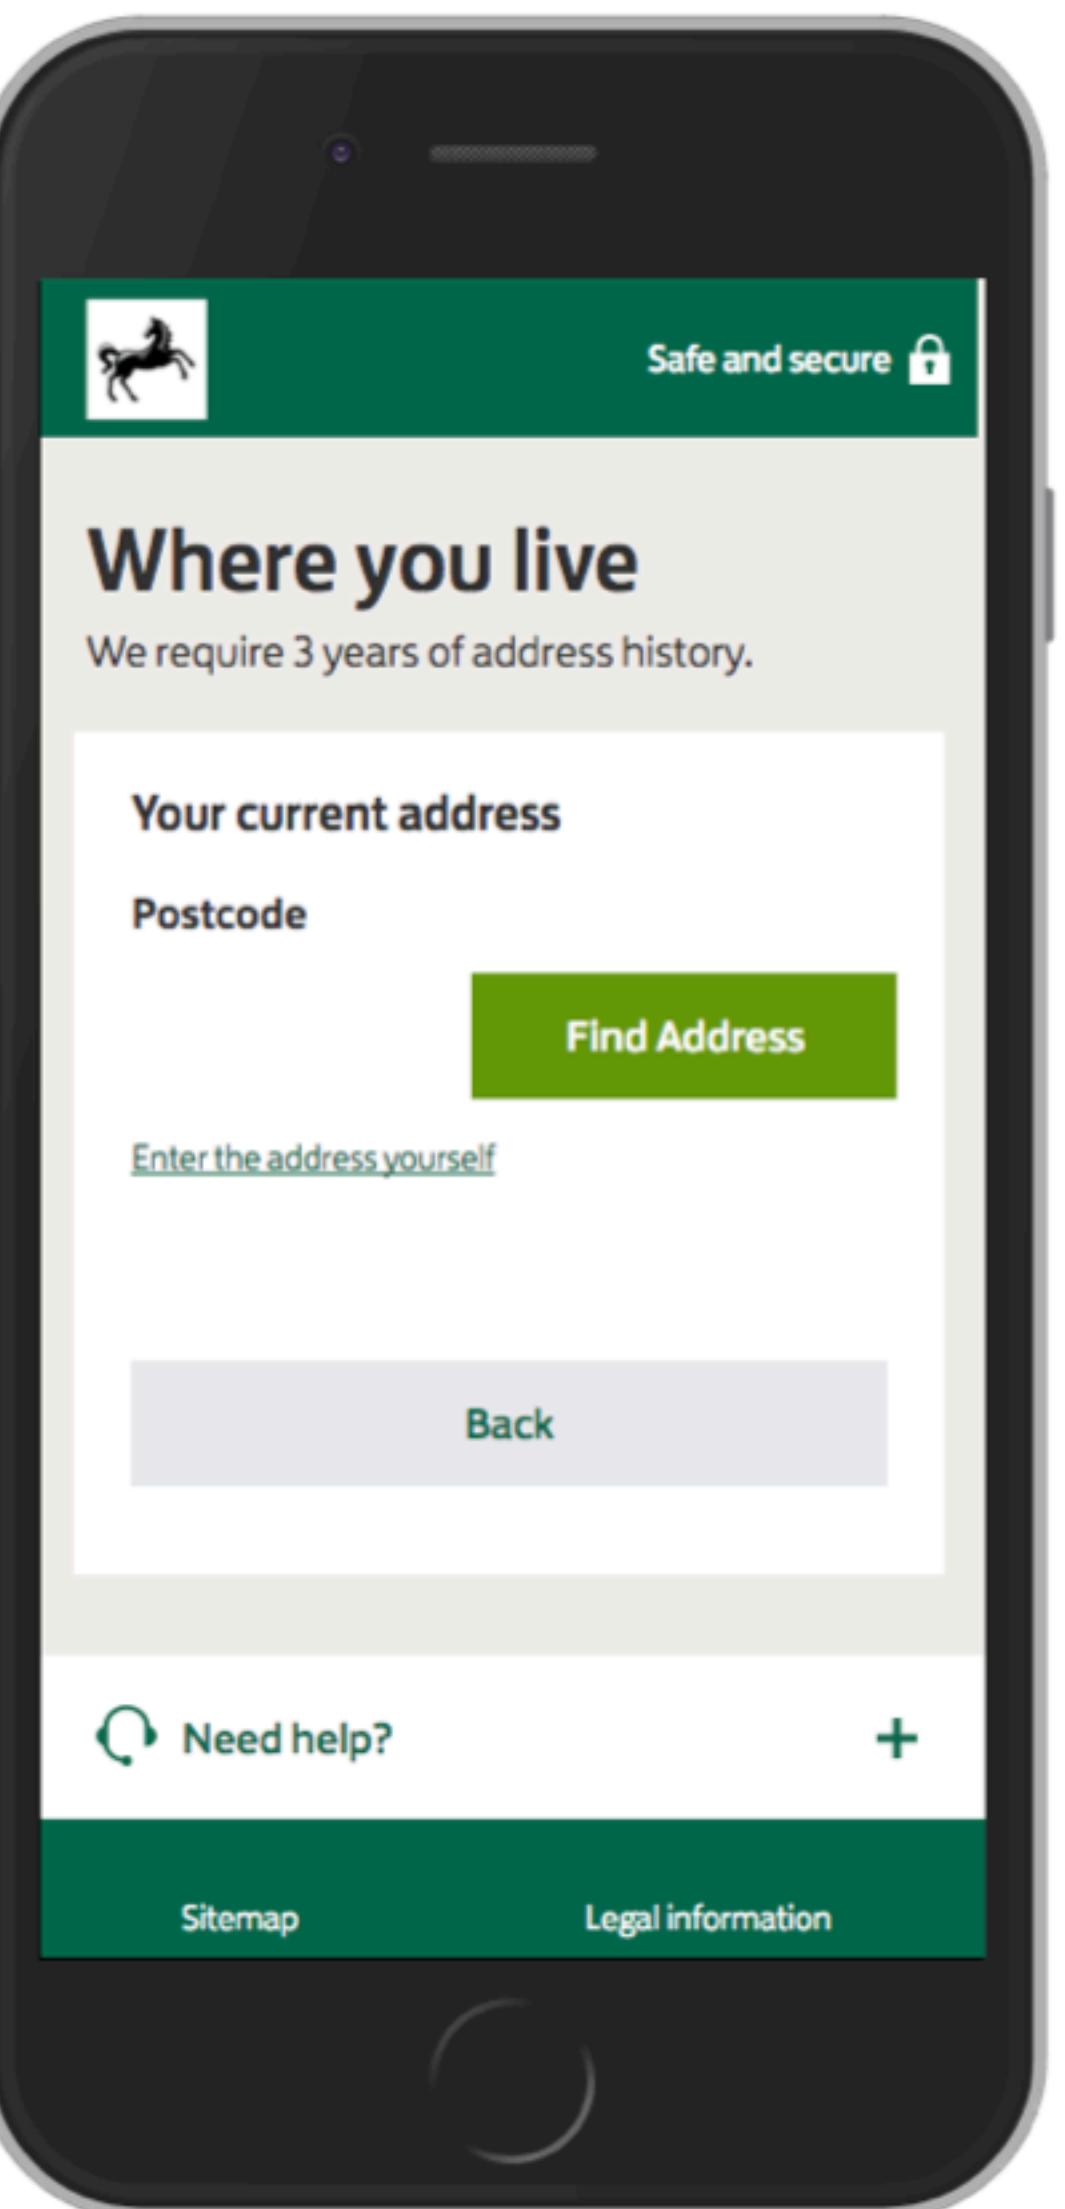

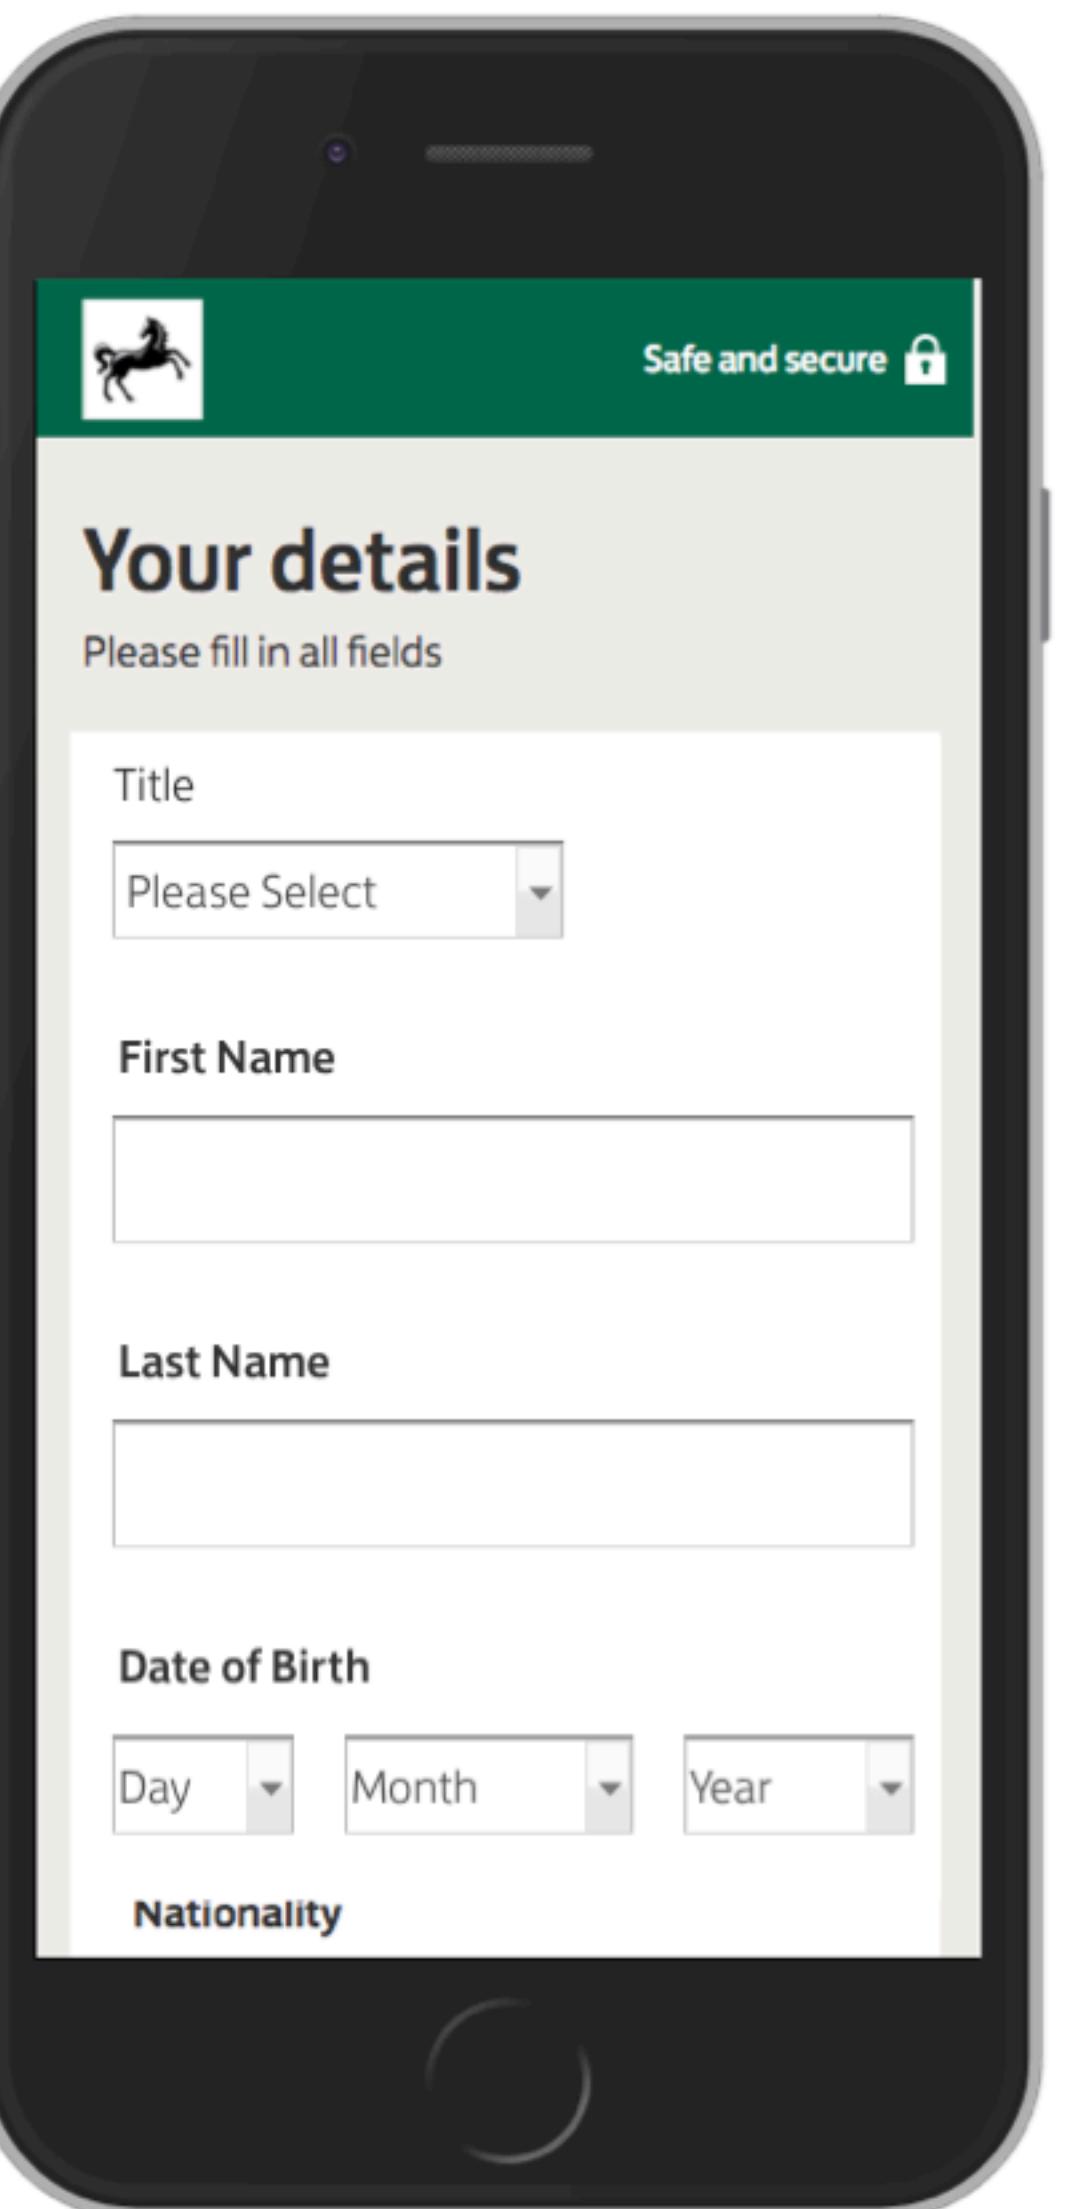

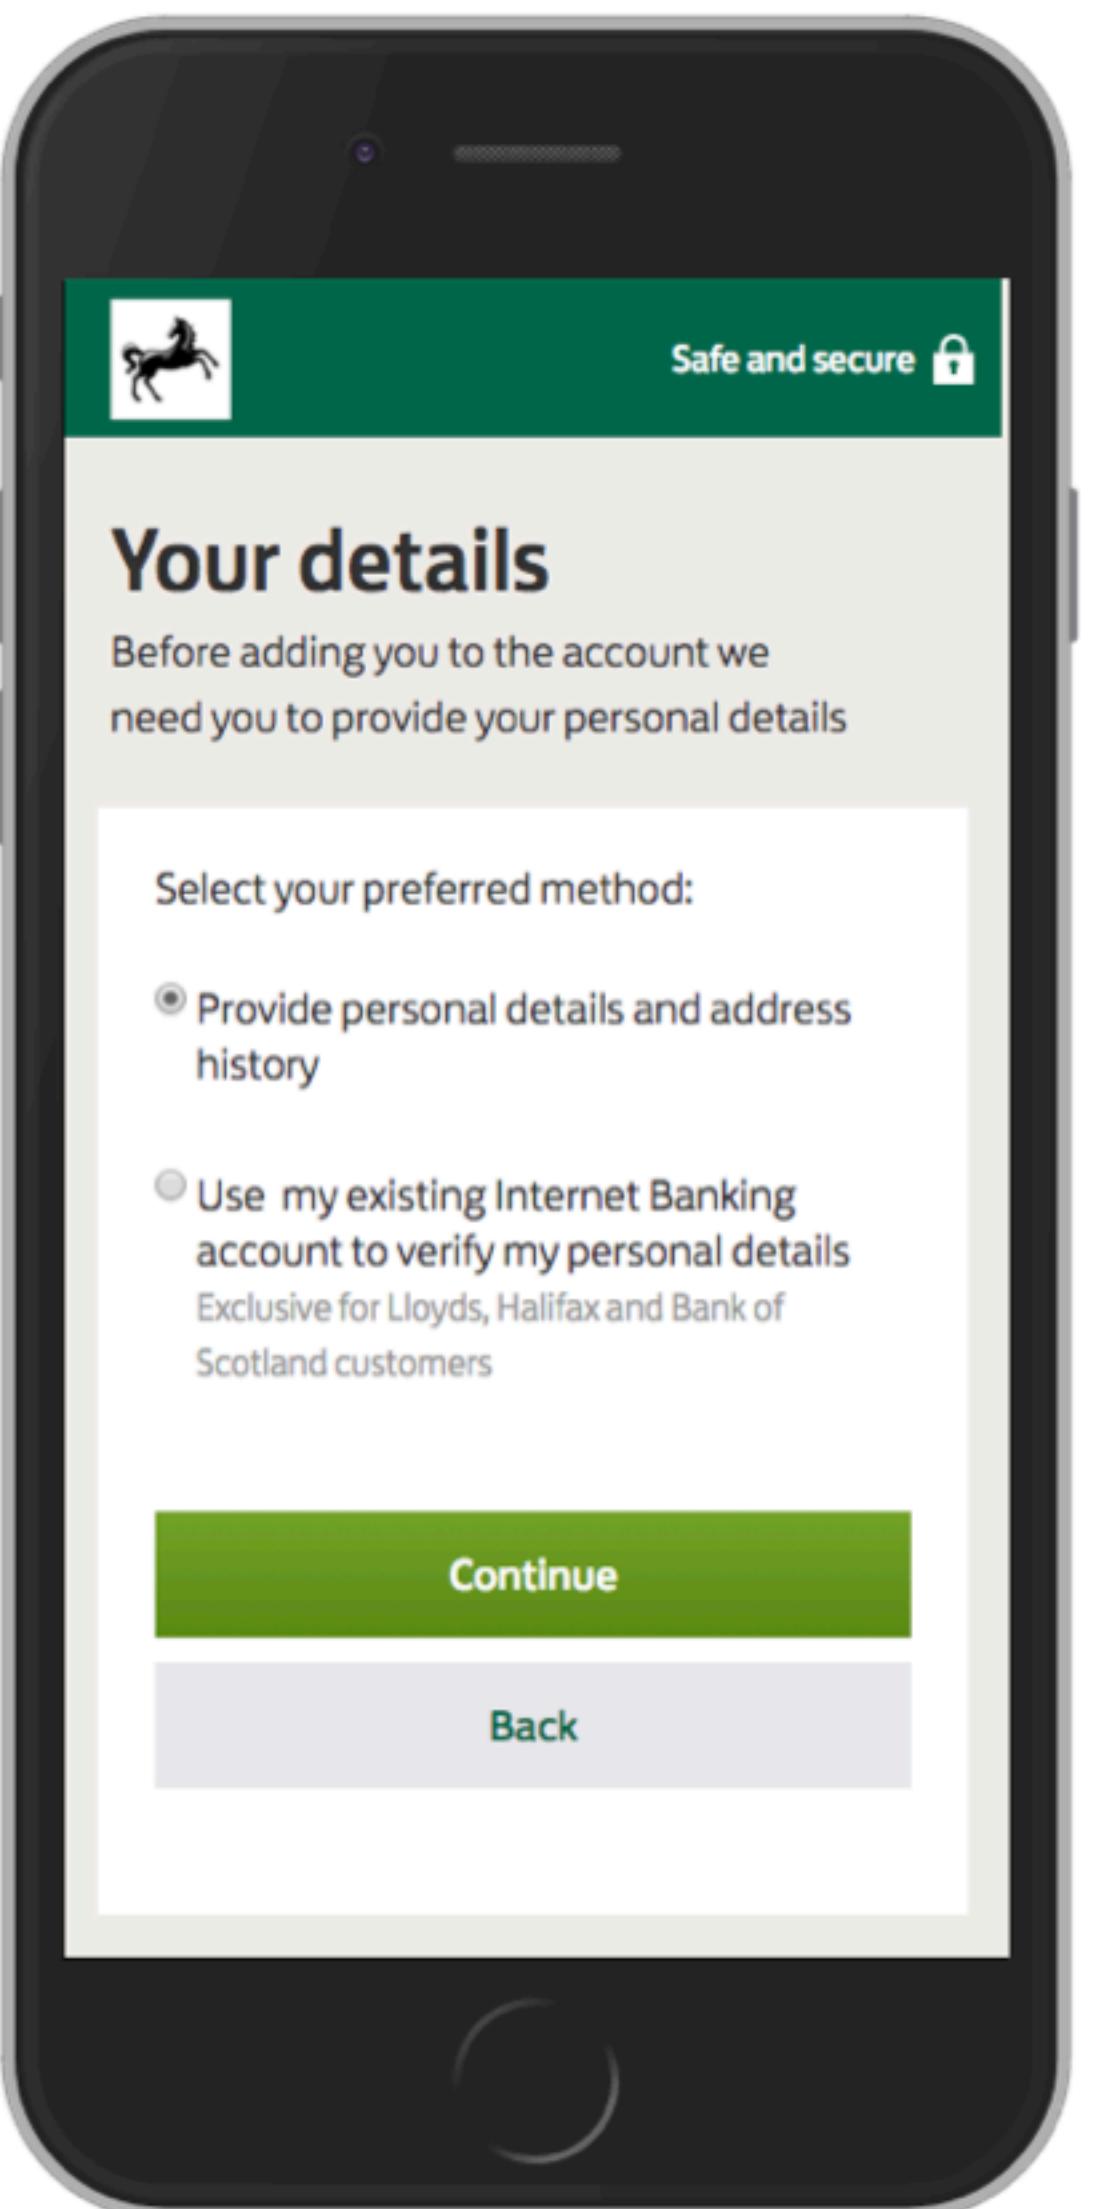

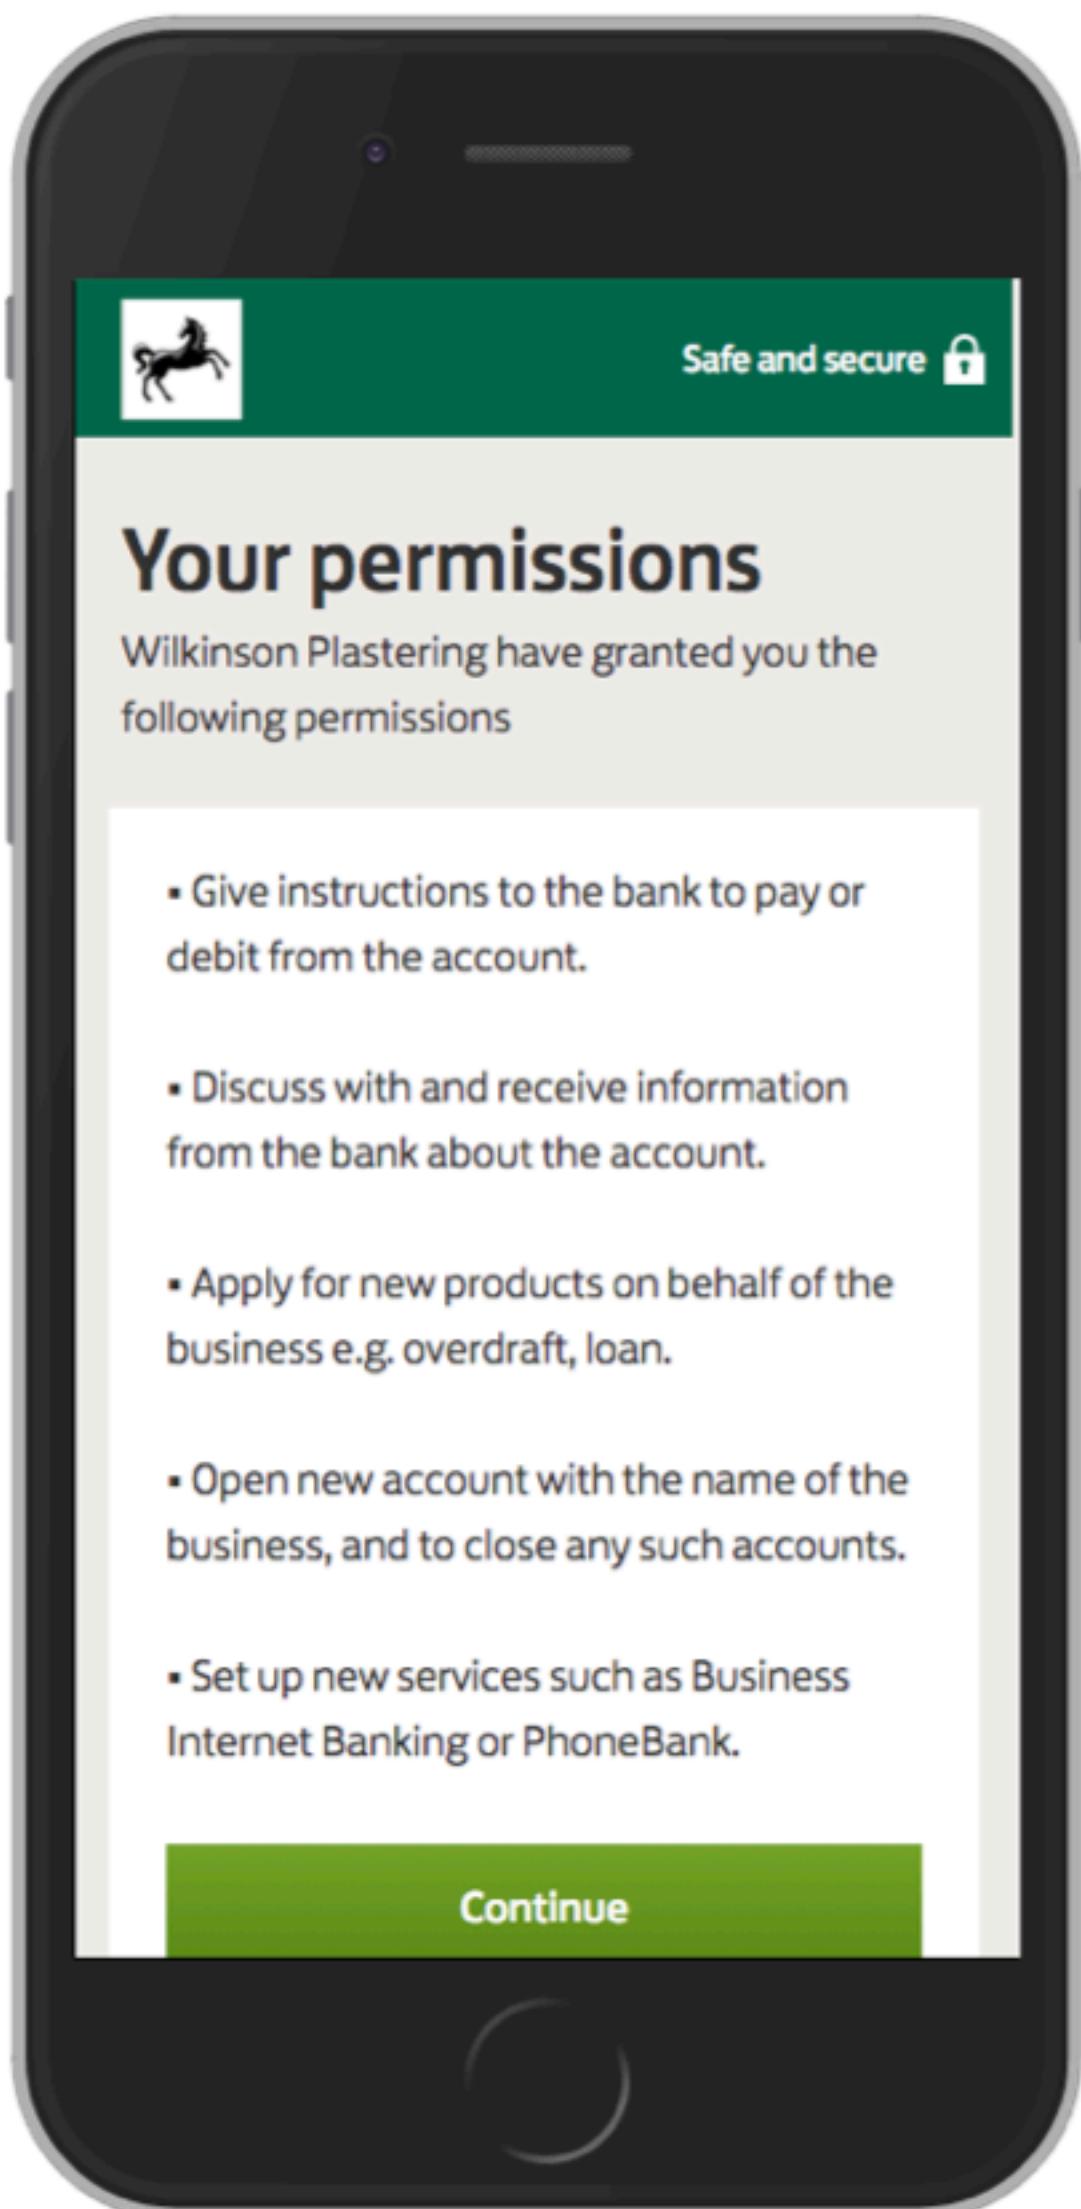

Accessibility and availability and continuity across channels was one of the biggest challenges.

## Experience Map - LBG - Commercial Servicing - Self Service - Future view for updating roles and permissions

Prototype available on demand. Live journey  
available online at [lloydsbank.com](http://lloydsbank.com)

Some of my work can't be shared in public due to NDA's.

Reach out for more case studies and detailed portolio.
